1	PE	ME-801	Total Quality Management (TQM)	3	0	0	3	40	60	100
2	PE	ME-802	Non-Conventional Energy resources	3	0	0	3	40	60	100
3	PE	ME-803	Production Planning and control	3	0	0	3	40	60	100

PROGRAM ELECTIVE –IV										
S. N.	Cat.	Subject Code	Title	Teaching Hours Per Week			Credits	Examination		
				L	T	P/D		I.A Marks	ESE Marks	Total Marks
1	PE	ME-804	Mechatronics	3	0	0	3	40	60	100
2	PE	ME-805	Gas Dynamics	3	0	0	3	40	60	100
3	PE	ME-806	Vibrations	3	0	0	3	40	60	100

Note: Industrial Project (ME-808) of Four months duration is to be carried out by the student **“exclusively in industry”** under the joint supervision of faculty advisers from institution as well as from the industry.

 Dean
 H.P. Technical University
 Hamirpur - 177001

SEMESTER-III

MA-301: PROBABILITY AND STATISTICS

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	2	0	3	40	60	100	3 hrs

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Probability and Random Variables: Introduction, Basic concepts–Sample space, Events, Counting sample space, Conditional Probability and Independence, Permutations and Combinations, Rules of Probability, Bayes' Theorem. Random Variables – Concept of Random Variable, Percentiles, Probability Distributions – Discrete & Continuous, Mean, Variance and Covariance of Random Variables, Chebychev's inequality.	6
II	Standard Probability Distributions: Discrete distributions - Uniform, Binomial, Multinomial, Hyper geometric, Poisson, Negative Binomial, Poisson; Continuous distributions - Normal, Exponential, Gamma, Weibull and Beta distributions and their properties -Function of Random variables.	6
III	Sampling Distributions: Random sampling, Sampling Distributions of Means, Estimation, Properties of point estimators, Confidence interval, Maximum likelihood and Bayes estimators, Prediction intervals.	6
IV	Testing of Hypothesis: Sampling distributions – testing of hypothesis for mean, variance, proportions and differences using Normal, t, Chi-square and F distributions, tests for independence of attributes and Goodness of fit. Linear Correlation and Regression Analysis: Introduction, Linear Regression model, Regression coefficient, Lines of correlation, Rank correlation	6

Text Books:

1. Gupta, S.C, and Kapur, J.N., "*Fundamentals of Mathematical Statistics*", Sultan Chand, Ninth Edition, New Delhi.
2. Johnson. R. A., "*Miller & Freund's Probability and Statistics for Engineers*", Sixth Edition, Pearson Education, Delhi.
3. Douglas C. Montgomery and George C. Runger, "*Applied Statistics and Probability for Engineers*", 5th Edition.

Reference books:

1. Walpole, R. E., Myers, R. H. Myers R. S. L. and Ye. K, ***“Probability and Statistics for Engineers and Scientists”***, Seventh Edition, Pearson Education, Delhi.
2. Lipschutz. S and Schiller. J, ***“Schaum’s outlines - Introduction to Probability and Statistics”***, McGraw-Hill, New Delhi.
3. S. M. Ross, ***“Introduction to Probability and Statistics for Engineers and Scientists”*** 4th edition.

HS-305: INDUSTRIAL ECONOMICS AND MANAGEMENT

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction to Engineering Economics - Technical efficiency, economic efficiency - cost concepts: elements of costs, opportunity cost, sunk cost, private and social cost, marginal cost, marginal revenue and profit maximization. Supply and Demand: Determinants of demand, law of demand, determinants of supply, law of supply, market equilibrium - elasticity of demand - types of elasticity, factors affecting the price elasticity of demand National Income Concepts: GDP and GNP, per capita income, methods of measuring national income. Inflation and deflation:	8
II	Value Analysis - Time value of money - interest formulae and their applications: single-payment compound amount factor, single-payment present worth factor, equal-payment series compound amount factor, equal-payment series sinking fund factor, equal-payment series present worth factor, equal-payment series capital recovery factor, effective interest rate. Investment Analysis: Payback period—average annual rate of return, net present value; Internal rate of return criteria, price changes, risk and uncertainty.	8
III	Principles of Management: Evolution of management theory and functions of management organizational structure - principle and types - decision making - strategic, tactical & operational decisions, decision making under certainty, risk & uncertainty and multistage decisions & decision tree. Human Resource Management: Basic concepts of job analysis, job evaluation, merit rating, wages, incentives, recruitment, training and industrial relations.	8
IV	Financial Management: Time value of money and comparison of alternative methods; costing – elements& components of cost, allocation of overheads, preparation of cost sheet, break even analysis - basics of accounting - principles of accounting, basic concepts of journal, ledger, trade, profit & loss account and balance sheet. Marketing Management: Basic concepts of marketing environment, marketing mix, advertising and sales promotion. Project Management: Phases, organization, planning, estimating, planning	8

	using PERT & CPM.

ME-301: STRENGTH OF MATERIALS-I

Teaching Scheme			Credit	Marks			Duration of End semester Examination
L	T	P/D	C	Sessional	End Semesteter	Total	
3	1	0	4	40	60	10	3Hrs

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Simple Stresses and Strains: Stress & Strain, Types of stresses and strains, elastic limit, Hooke's law, Stress-Strain diagram for ductile and brittle, Factor of Safety, Poisson's ratio, Elastic constants, Young's Modulus, Shear Modulus, and Bulk Modulus, Relationship between elastic constants. Introduction to thermal stresses and strains. Compound stresses & strains: Concept of surface and volumetric strains, two – dimensional stress system, complementary shear stresses at a point on a plane. Principal stresses & strains and principal planes. Mohr's circle of stresses, Numerical problems.	9
II	Bending Stresses in Beams: Bending stresses in Beams with derivation of Bending equation and its application to beams of circular, rectangular, I & T sections, Composite Beams. Torsion of Circular Shaft: Theory of Pure Torsion, Derivation of Torsion equation for a circular shaft subjected to torsion, assumptions, derivation of maximum torque transmitted by a solid shaft, and hollow shaft.	8
III	Shear and combined stresses in beams: Shear stresses in beams with derivation of shear stress in rectangular I, T, circular and hollow circular sections. Combined bending, torsion & axial loading of beams. Numerical problems. Slope & Deflection: Relationship between bending moment, slope & deflection, Method of integration, Macaulay's method, Mohr's theorem-moment area method, ., Calculations for slope & deflection of (1) cantilevers and (2) simply supported beams with or without overhang, under concentrated loads, uniformly distributed loads, or combination of any two or all of these types of loads. distributed loads. Numerical problems.	9
IV	Theories of Elastic Failure: Various theories of elastic failure with derivations and graphical representations, applications to problems of two-dimensional stress systems with (i) Combined direct loading and bending and (ii) combined torsional and direct loading. Numerical problems. Strain Energy & Impact Loading: Definitions, expressions for strain energy stored in a body when load is applied (i) gradually, (ii) suddenly and (iii) with impact. Strain energy of beams in bending, beam deflections. Strain energy of shafts in twisting. Energy methods in determining spring deflection, Castigliano's	8

	& Maxwell's theorems, Numerical problems

ME-302: FLUID MECHANICS

Teaching Scheme			Credit	Marks			Duration of End semester Examination
L	T	P/D	C	Sessional	End Semester	Total	
3	1	0	4	40	60	100	3Hrs

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: Fluid Definition and properties, Newton's law of viscosity concept of continuum, Classification of fluids. Fluid Statics: Definition of body and surface forces, Pascal's law, Basic hydrostatic equation, Forces on surfaces due to hydrostatic pressure, Buoyancy and Archimedes' principle, Meta center, stability of floating and submerged bodies.	8
II	Fluid Kinematics: Eulerian and Lagrangian approach to solutions; Velocity and acceleration in an Eulerian flow field; Definition of streamlines, path lines and streak lines; Definition of steady/unsteady, uniform/non-uniform, one-two and three dimensional flows; Definition of control volume and control surface, stream function, velocity potential function, irrotational flows; Definition and equations for source, sink, irrotational vortex, circulation. Fluid Dynamics I :Integral equations for the control volume: Reynold's Transport theorem, equations for conservation of mass, energy and momentum, Momentum and Energy correction factors, Bernoulli's equation and its application in flow measurement, mouth pieces, pitot tube, venture, orifice and nozzle meters.	9
III	Fluid Dynamics II: Differential equations for the control volume: Mass conservation in 2 and 3 dimension in rectangular and cylindrical co-ordinates, Euler's equations in 2,3dimensions and subsequent derivation of Bernoulli's equation; Navier-Stokes equations, Couette flow, plane Poiseuille flow Real fluid flows: Definition of Reynold's number, Laminar flow through a pipe (Hagen Poiseuille flow), velocity profile and head loss; Prandtl mixing length theory; velocity profiles for turbulent flows, Velocity profiles for smooth and rough pipes Darcy's equation for head loss in pipe, Moody's diagram, pipes in series and parallel, major and minor losses in pipes	9
IV	Boundary Layer Flows: Concept of boundary layer and definition of boundary layer thickness, displacement, momentum and energy thickness; laminar and turbulent boundary layers, laminar sub-layer; Von Karman Momentum Integral equation for boundary layers, analysis of laminar and	8

	turbulent boundary layers, drag, boundary layer separation and methods to control it, streamlined and bluff bodies. Dimensional analysis: Buckingham's Pi theorem, Non – dimensional numbers and their application, similitude, scale effects	
--	--	--

Text Books:

1. *Introduction to Fluid Mechanics and Machines*, S. K Som , McGraw Hill
2. P.N.Modi and S.M.Seth (1999), *Hydraulics and Fluid Mechanics including Hydraulic Machines*, Standard Book House, Naisarak, Delhi

Reference Books:

1. *Fluid Mechanics*: F.M.White, McGraw Hill
2. *Fluid Mechanics*: Cengel and Cimbala
3. *Fluid Mechanics and Fluid Power Engineering* – D.S.Kumar, S.K.Kataria and Sons.
4. *Mechanics of Fluids*: Irving Shames

ME-303: ENGINEERING THERMODYNAMICS

Teaching Scheme			Credit	Marks			Duration of End semester Examination
L	T	P/D	C	Sessional	End Semester	Total	
3	0	0	3	40	60	100	3Hrs

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction and Basic Concepts: Application areas of thermodynamics, Systems and Control volumes, Properties of system, Continuum, State and equilibrium, Processes and cycles, Temperature and Zeroth law of thermodynamics, Heat and thermodynamic, concept of work. First Law of Thermodynamics: Statement, Heat and work calculations, Application of first law to non-flow and flow systems, steady flow energy equation as applied to boiler, condenser, throttle, nozzle and turbine	8
II	Second Law of Thermodynamics: Statements and their equivalence, thermal energy reservoirs, concept of heat engine, refrigerator, heat pump and perpetual motion machines, Carnot cycle and principles. Entropy: Concept of entropy, Temperature- entropy plot, Clausius inequality theorem, Principle of Increase of entropy, entropy balance, entropy generation in daily life, first and second law combined, entropy changes of an ideal gas during reversible processes, Available and unavailable energy, Irreversibility, second law efficiency	8
III	Property Relations: Introduction to Maxwell relations, Clausius-Clapeyron equation, volume expansivity and isothermal compressibility, Mayer relation, Joule-Thomson coefficient. Properties of Steam: Dryness fraction, enthalpy, internal energy and entropy, steam table, polynomial form of steam equations and Mollier chart, First law applied to steam processes	8
IV	Power Cycles: Vapor power Cycles: Carnot vapour cycle, Rankine cycle, Ideal reheat Rankine cycle, Introduction to co-generation. Gas Power Cycles: Air standard assumptions, Otto cycle, Diesel cycle, dual cycle, Stirling cycle, Ericsson cycle, Brayton cycle Reactive Systems: Combustion, theoretical and actual combustion processes, enthalpy of formation and enthalpy of combustion, adiabatic flame temperature, first law analysis of reactive system	8

Text Books

1. ***Thermodynamics*** by P K Nag, TMH, 5TH Edition
2. ***Fundamentals of Classical Thermodynamics*** by Van Wylen G.H. & Sonntag R.E., John Wiley & Sons.

Reference Books:

1. ***Thermodynamics: An Engineering Approach***, Yunus A. Cengel and Michael A Boles, 7e, TMH.
2. ***Thermodynamics and Heat Engines*** by R Yadav, Central Publishing house.
3. Holman, J.P. ***Thermodynamics***. McGraw- Hill
4. ***Thermal Engineering*** by Mahesh Rathod, McGrawHill Publications
5. ***Engineering Thermodynamics- A Generalized Approach*** by P L Dhar, ELSEVIER
6. ***Fundamentals of Thermodynamics*** by Moran & Shapiro.
7. Schaum's Outlines: ***Thermodynamics for Engineers*** by Merle C. Potter

ME-304: MACHINE DRAWING

Teaching Scheme			Credit	Marks			Duration of End semester Examination
L	T	P/D	C	Sessional	End Semester	Total	
2	0	3	3	40	60	100	3Hrs

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: Introduction to BIS Specification sp: 46- 1988 Code of engineering drawing – Limits. Fits and Tolerance (dimensional and Geometrical tolerance), Surface finish representation.	7
II	Gear: Gear terminology. I.S convention of assembly of spur gears, helical gear, bevel gears, worm and worm wheel. Fasteners: Drawings of various views of Screw threads, metric and BSW threads, Square thread and multi start threads. Nut bolts, Washers, Setscrew, Locknuts and foundation bolts.	7
III	Orthographic view: Orthographic view from isometric views of machine parts / components. Dimensioning- Sectioning. Exercises on coupling, crankshaft, pulley, piston and connecting rod, cotter and knuckle joints. Riveted joints and Welded joints.	7
IV	Assembly drawing: Assembly drawings with sectioning and bill of materials from given detail drawings of assemblies: Lathe tail stock, machine vice, pedestal bearing, Steam stop valve, drill jigs and milling fixture.	7

Text Books:

1. **Machine Drawing:** N D Bhat and V M Panchal, Pub: Charotar Publishing House.
2. **A text book of machine drawing:** PS Gill, Pub: S.K.Kataria& Sons.

Reference Books:

1. **A text books of machine Drawing:** Laxminarayana and Mathur, Pub: M/S Jain Brother. New Delhi.
2. **Machine Drawing:** N Sidheshwar, P Kannaieh, V S Sastry, Pub: Tata McGraw Hill.

HS 306: SOCIOLOGY AND ELEMENTS OF INDIAN HISTORY FOR ENGINEERS

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	0	0	2	40	60	100	3 hrs

COURSE OBJECTIVE:

- To familiarize the students with elements of Indian history and sociological concepts and theories by which they could understand contemporary issues and problems in Indian society.
- To enable the students to analyse critically the social processes of globalization, modernization and social change.
- To help the students imbibe such skills that will enable them to be better citizens and human beings.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction to sociological concepts - structure, system, organization, social institution, Culture social stratification (caste, class, gender, power). Understanding social structure and social processes - Perspectives of Marx and Weber.	6
II	Political economy of Indian society - Industrial, Urban, Agrarian and Tribal society. Social change in contemporary India - Modernization and globalization, Secularism and communalism.	6
III	Introduction to Elements of Indian History - What is history? ; History Sources - Archaeology, Numismatics, Epigraphy and Archival research. Indian history and periodization - evolution of urbanization process: first, second and third phase of urbanization.	6
IV	From feudalism to colonialism -the coming of British; Modernity and struggle for independence. Issues and concerns in post-colonial India (upto 1991) - Issues and concerns in post-colonial India 2nd phase (LPG decade post 1991)	6

Text Books:

1. Desai, A.R. (2005), *Social Background of Indian Nationalism*, Popular Prakashan.
2. Giddens, A (2009), *Sociology, Polity*, 6th Edition.

3. Chandoke, Neera & Praveen Priyadarshi(2009), *contemporary India: Economy, Society and Politics*, Pearson.

Reference Books:

1. Guha, Ramachandra(2007), *India After Gandhi*, Pan Macmillan.
2. Haralambos M, RM Heald, M Holborn (2000), *Sociology*, Collins.
3. Sharma R. S..(1965), *Indian feudalism*, Macmillan.
4. Gadgil, Madhab&RamchandraGuha(1999) - *This Fissured Land: An Ecological History of India*, OU Press.

HS-307: GERMAN LANGUAGE – I

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	0	0	2	40	60	100	3 hrs

COURSE OBJECTIVES:

- To read and write short, simple texts.
- To understand a dialogue between two native speakers and also take part in short, simple conversations using the skills acquired.
- To offers opportunities for students of engineering for higher studies, research and employment in Germany.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Wichtige Sprachhandlungen: Phonetics – Sich begrüßen - Sich und andere vorstellen formell / informell - Zahlen von 1 bis 1 Milliarde - verstehen & sprechen. Grammatik: regelmäßige Verben im Präsens - “sein” und haben im Präsens - Personalpronomen im Nominativ	6
II	Wichtige Sprachhandlungen: Telefon Nummern verstehen und sprechen Uhrzeiten verstehen und sagen Verneinung “nicht und kein” (formell und informell). Grammatik: Wortstellung – Aussagesatz – W-Frage und Satzfrage (Ja/Nein Frage) Nomenbuchstabieren und notieren bestimmter und unbestimmter Artikel und Negativartikel im Nom. & Akkusativ	6
III	Wichtige Sprachhandlungen: Tageszeiten verstehen und über Termine sprechen - Verabredungen verstehen – Aufgaben im Haushalt verstehen. Grammatik: Personalpronomen im Akkusativ und Dativ - W-Fragen “wie, wer, wohin, wo, was usw.-Genitiv bei Personennamen - Modalverben im Präsens “können, müssen, möchten”	6
IV	Wichtige Sprachhandlungen: Sich austauschen, was man kann, muss – Bezeichnungen Lebensmittel – Mengenangaben verstehen – Preise verstehen und Einkaufszettel schreiben Grammatik: Wortstellung in Sätzen mit Modalverben – Konnektor “und” – “noch”-kein-----mehr – “wieviel, wieviele, wie alt, wie lange” – Possessivartikel im Nominativ	6
V	Wichtige Sprachhandlungen: Freizeitanzeigen verstehen – Hobbys und Sportarten Anzeigen für Freizeitpartners schreiben bzw. darauf antworten	6

	–Vorlieben und Abneigungen ausdrücken Grammatik: Verben mit Vokalwechsel im Präsens – Modalverben im Präsens “dürfen, wollen und mögen - “haben und sein” im Präteritum – regelmäßige Verben im Perfekt – Konnektoren “denn, oder, aber.

HS-308: FRENCH LANGUAGE - I

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	0	0	2	40	60	100	3 hrs

COURSE OBJECTIVES:

- To read and write short, simple texts.
- To understand a dialogue between two native speakers and also take part in short, simple conversations using the skills acquired.
- To offers opportunities for students of engineering for higher studies, research and employment in French.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Grammar and Vocabulary: Usage of the French verb “se presenter”, a verb of self- introduction and how to greet a person- “saluer”. Listening and Speaking: The authentic sounds of the letters of the French alphabet and the accents that play a vital role in the pronunciation of the words. Writing: Correct spellings of French scientific and technical vocabulary. Reading: Reading of the text and comprehension – answering questions.	6
II	Grammar and Vocabulary: Definite articles, “prepositions de lieu” subject pronouns. Listening and Speaking: Pronunciation of words like Isabelle, presentez and la liaison – vous etes, vous appelez and role play of introducing each other –group activity. Writing: Particulars in filling an enrolment / registration form. Reading Comprehension: reading a text of a famous scientist and answering questions.	6
III	Grammar and Vocabulary: Verb of possession “avoir” and 1st group verbs “er”, possessive adjectives and pronouns of insistence- moi, lui..and numbers from 0 to 20. Listening and Speaking: Nasal sounds of the words like feminine, ceinture, parfum and how to ask simple questions on one’s name, age, nationality, address mail id and telephone number. Writing: Conjugations of first group verbs and paragraph writing on self – introduction and introducing a third person. Reading Comprehension: reading a text that speaks of one’s profile and answering questions	6
IV	Grammar and Vocabulary: Negative sentences, numbers from 20 to 69, verb “aimer” and seasons of the year and leisure activities. Listening and Speaking: To express one’s likes and dislikes and to talk of one’s	6

	pastime activities (sports activities), je fais du ping-pong and nasalsounds of words – janvier, champagne. Writing-Conjugations of the irregular verbs: faire and savoir and their usage.Paragraph writing on one’s leisure activity- (passé temps favori). Reading: a text on seasons and leisure activities – answering questions.	
V	Grammar and Vocabulary: les verbes de direction- to ask one’s way and to give directions, verbes- pouvoir and vouloir and 2nd group verbs, a droite, la premiere a gauche and vocabulary relating to accommodation. Listening and Speaking:To read and understand the metro map and hence to give one directions – dialogue between two people. Writing:Paragraph writing describing the accommodation using the different prepositions like en face de, derriere- to locate. Reading Comprehension:A text / a dialogue between two on location and directions- ouest la poste/ la pharmacie, la bibliotheque?.....	6

ME-305: STRENGTH OF MATERIALS LAB.

Teaching Scheme			Credits	Marks			Duration	End
L	T	P/D	C	I.A.	ESE	Total	Semester Examination	
0	0	2	1	30	20	50	3 hrs	

Experiments as per the topics in the syllabus for the course ‘Analog Electronics Lab’ will be conducted in the laboratory class. Following is the list of experiments out of which 8-9 experiments must be performed during the semester:

LIST OF EXPERIMENTS:

1. To study the Brinell and Rockwell hardness testing machine & compare hardness of at least two types of materials/alloys,
2. To study the Vickers hardness testing machine & perform Vickers hardness test & compare hardness of at least two types of materials/alloys,
3. To study the Impact Testing Machine and perform the Impact tests (Izod & Charpy),
4. To study the Universal testing machine and perform the tensile test for comparing graphs of at least two types of materials/alloys,
5. To perform compression test on UTM,
6. To perform bending/shear test on UTM,
7. To perform the torsion test on mild steel/aluminium alloy,
8. To perform fatigue test on mild steel/aluminium alloy,
9. To find Young’s Modulus of a beam (rectangular/triangular/circular section) using deflection of beam apparatus,
10. To find Modulus of Rigidity of a specimen using Searl’s Apparatus

ME-306: FLUID MECHANICS LAB

Teaching Scheme			Credits	Marks			Duration End Semester Examination
L	T	P/D	C	I.A.	ESE	Total	
0	0	2	1	30	20	50	3 hrs

Experiments as per the topics in the syllabus for the course ‘Analog Electronics Lab’ will be conducted in the laboratory class. Following is the list of experiments out of which 8-9 experiments must be performed during the semester:

List of Experiments:

1. To determine the coefficient of impact for vanes.
2. To determine the coefficient of discharge of Notch (V and Rectangular types)
3. To determine the friction factor for the pipes.
4. To determine the coefficient of discharge of venturimeter /orifice meter/pitot tube.
5. To determine the coefficient of discharge, contraction & velocity of an orifice.
6. To find critical Reynolds number for a pipe flow.
7. To study the effect of pressure surge in pipes.
8. To determine the minor losses due to sudden enlargement, sudden contraction and bends.
9. To show the velocity and pressure variation with radius in a forced vortex flow
10. To determine lift and drag of an aerofoil.
11. To determine the static pressure and dynamic pressure distribution around an aerofoil using wind tunnel apparatus
12. To determine the meta-centric height of a floating body
13. To perform the calibration of pressure gauge

ME-307: COMPUTER AIDED DESIGN (CAD) LAB

Teaching Scheme			Credits	Marks			Duration	End
L	T	P/D	C	I.A.	ESE	Total	Semester Examination	
0	0	3	2	30	20	50	3 hrs	

Experiments as per the topics in the syllabus for the course ‘Analog Electronics Lab’ will be conducted in the laboratory class. Following is the list of experiments out of which 8-9 experiments must be performed during the semester:

LIST OF EXPERIMENTS:

1. Setting up of drawing environment by setting drawing limits, drawing units, naming the drawing naming layers, setting line types for different layers using various type of lines in Engineering drawing, saving the file with dwg. extension.
2. Layout drawing of a building using different layer and line colors indicating all Building details name the details using text commands, Make a title Block.
3. To Draw Orthographic projection drawings (Front, Top and side) of boiler safety valve giving name the components of the valve.
4. Make an Isometric dimensioned drawing of a connecting Rod using Isometric grid and snap.
5. Draw quarter sectional isometric view of a cotter joint.
6. Draw different types of bolts and nuts with internal and external threading in Acme and square threading standards. Save the bolts and nuts as blocks suitable for insertion.
7. Draw a 3D model of a machine component using 3D primitives and using commands like Union. Subtraction, Revolve, Slice, Rotate 3D etc. Calculate surface Area, Mass, Centre of Gravity and Mass moment of inertia using inquiry commands render the figure made and attach a material to the figure.
8. Draw 3D model of protected type flange coupling.
9. Draw a spiral by extruding a circle.
10. Draw an assembly of Jigs & Fixture in 3D.

SEMESTER-IV

MA-401: OPTIMIZATION AND CALCULUS OF VARIATIONS

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	2	0	3	40	60	100	3 hrs

COURSE OBJECTIVES:

The objective of this course is to present different methods of solving optimization problems in the three areas of linear programming, nonlinear programming, and classical calculus of variations. In addition to theoretical treatments, there will be some introduction to numerical methods for optimization problems.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: A survey of some simplified examples of common real world situations leading to optimization problems, basic formulation and theory of optimization problems. Linear programming: Linear programming (optimization of linear functions subject to linear constraints): basic theory; simplex method; duality, practical techniques.	6
II	Linear programming: Basic LPP - solution techniques (Simplex, Artificial Basis), Complimentary Slackness Theorem, Fundamental theorem of Duality, degenerate solutions, cycling; Applications - elements of dynamic programming including Hamiltonian, Bellman's optimality principle. Transportation and Assignment Problems: Solution of a balanced transportation problem, degeneracy in transportation problems and alternate solutions, Mathematical problems in formulation of assignment problems.	7
III	Nonlinear programming: Nonlinear programming (optimization of nonlinear functions subject to constraints) with Lagrange multipliers, Karush-Kuhn-Tucker optimality conditions, convexity, duality. Approximation methods for nonlinear programming: Line search methods, gradient methods, conjugate gradient methods; Networking techniques – PERT and CPM.	6
IV	Calculus of Variations: Basic definitions - functionals, extremum, variations, function spaces; Necessary conditions for an extremum, Euler-Lagrange Equation, convexity and its role in minimization, minimization under constraints;	6

	Existence and nonexistence of minimizers; Applications - Isoperimetric problems, Geodesics on the surface.	
--	--	--

HS-409: HUMAN VALUES AND PROFESSIONAL ETHICS

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	2	0	3	40	60	100	3 hrs

COURSE OBJECTIVES:

- To enable students to explore the purpose of value education.
- To understand the purpose of harmony with oneself, family, society and nature.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction –Need and Basic Guidelines 1. Understanding the need , basic guidelines, content and process of value Education 2. Self-Exploration – purpose, content and process, ‘Natural Acceptance’ and Experiential Validation – as the mechanism for self-explanation.	6
II	Process for Value Education 1. Continuous Happiness and Prosperity – A look at basic Human Aspirations. 2. Right Understanding, Relationship and Physical Facilities – basic requirements for fulfillment of aspirations of every human being with their correct priority 3. Understanding Happiness and prosperity – A critical appraisal of the current scenario. 4. Method to fulfill the human aspirations; understanding and living in harmony at various levels	7
III	Harmony in Human Beings 1. Understanding human being as a co-existence of the self and the body. 2. Understanding the needs of Self (‘I’) and ‘Body’ – Sukh and Suvidha. 3. Understanding the Body as an instrument of ‘I’ (I being the doer, seer and enjoyer)	7
IV	Harmony in Myself and body 1. Understanding the characteristics and activities of ‘I’ and harmony in ‘I’ 2. Understanding the harmony of I with the Body: Sanyam and Swasthya: correct appraisal of Physical needs, meaning of Prosperity in detail.	6
V	Harmony in Family, Society and Nature	6

	1. Understanding harmony in the family, society and nature. 2. Understanding values in human relationship; meaning of Nyaya and Program for its fulfillment to ensure Ubhay-tripti. 3. Trust (Vishwas) and Respect (Samman) as the foundational values of relationship.

ME-401: MANUFACTURING TECHNOLOGY-I

Teaching Scheme			Credit	Marks			Duration of End semester Examination
L	T	P/D	C	Sessional	End Semester	Total	
3	0	0	3	40	60	100	3Hrs

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction to Manufacturing and Manufacturing Processes, Classification of Manufacturing Processes, Metal Casting Processes: Introduction, Basic steps in Casting Processes, Advantage and limitations, sand mold making procedure, Patterns and Cores. Pattern materials, pattern allowances, types of pattern, colour coding, Moulding material, Moulding sand composition, and preparation, sand properties and testing type of sand moulds. Types of cores, core prints, chaplets, chills. Gating systems and Casting Defects, Gates and gating systems risers, melting practice, Cupola, charge calculations. Casting cleaning and casting defects Fettling, defects in castings and their remedies, methods of testing of castings for their soundness. Special Casting Processes: Shell molding, precision investment casting, permanent mold casting, die casting, centrifugal casting, and continuous casting.	9
II	Metal forming Processes: Introduction to Forming, Nature of plastic deformation, hot working and cold working. Principles of rolling roll passes roll pass sequences. Forging: Forging operations, smith forging, drop forging, press forging, forging defects. Extrusion and other processes: Extrusion principle, hot extrusion, cold extrusion, wire drawing, swaging, tube making, Sheet metal operation: Press tool operations, shearing action, drawing dies, spinning, punching, piercing, bending, stretch forming, embossing and coining.	8
III	Welding and Welding Defects: Introduction to Welding, Gas and Arc Welding, Classification: Oxyacetylene welding equipment and techniques. Electric arc welding: Electrodes, Tungsten inert gas welding (TIG), metal inert gas welding (MIG), submerged arc welding (SAW), Resistance Welding: Principle & types, Welding Defects and Remedies. Other Joining Processes: Thermit welding, electro slag welding, electron beam welding, forge welding, friction welding, diffusion welding, brazing and soldering and Mechanical joining, Joining Plastic	9
IV	Plastic Manufacturing Processes Classification of plastic materials, Manufacturing of plastic products, casting, compression moulding, transfer moulding, Injection Moulding, Extrusion, calendering, blow moulding, forming shaping methods, laminating methods, reinforced plastic moulding.	8

	Powder Metallurgy: Introduction, Operation in powder metallurgy, Production of Metal powders, Properties of metal powder, Blending of metal powders, Compaction of metal powders, Sintering and secondary operation, Application of powder Metallurgy

ME-402: STRENGTH OF MATERIALS-II

Teaching Scheme			Credit	Marks			Duration of End semester Examination
L	T	P/D	C	Sessional	End Semester	Total	
3	1	0	4	40	60	100	3Hrs

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Thin Walled Vessels: Derivation of Hoop & Longitudinal stresses & strains in cylindrical & spherical vessels under internal pressure. Change in volume of vessel under pressure, Numerical problems. Thick Cylinders & Spheres: Derivation of equations for radial & hoop stresses and strains in thick cylinders and spherical shells. Compound cylinders and spherical shells subjected to internal fluid pressure only, hub shrunk on solid shaft. Wire-wound cylinders. Numerical problems.	9
II	Rotating Rims, Discs & Cylinders: Stresses and strains in (i) rotating rims, neglecting the effect of spokes, (ii) rotating discs, including disc of uniform strength and disc shrunk on hub (iii) rotating cylinders (solid & hollow). Numerical problems.	8
III	Columns & Struts: Columns under axial load, concept of instability and buckling, slenderness ratio. Derivation of Euler's formulae for the elastic buckling load. Euler's, Rankine Gordon's formulae, Johnson's empirical formula for axial loading of columns and their applications, eccentric compression of a short strut of rectangular & circular sections, Numerical problems. Springs: Stresses in closed and open coiled helical springs subjected to axial loads and twisting couples. Leaf springs, flat spiral springs. Numerical Problems.	9
IV	Bending of Curved Bars: Stresses in bars of initial large radius of curvature, bars of initial small radius of curvature. Stresses in crane hooks, rings and chain links of circular & trapezoidal sections. Numerical Problems. Unsymmetrical bending: Introduction to unsymmetrical bending, Shear Center, Numerical problems.	9

2. *Mechanics of Solids*-James Goodno, Thomson Publishers.
3. *Strength of Materials*-Popov , PHI, New Delhi.
4. *Strength of Materials*-G.H. Ryder- Third Edition in S.I. units 1969 Macmillan India.

ME -403: I.C. ENGINES

Teaching Scheme			Credit	Marks			Duration of End semester Examination
L	T	P/D	C	Sessional	End Semester	Total	
3	0	0	3	40	60	100	3Hrs

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction Heat engines; Internal and external combustion engines; Classification of I.C. Engines; Cycle of operations in four strokes and two-stroke IC engines and their comparative study; Fuels: SI and CI engine fuels, Rating of fuels, Scavenging and scavenging blowers, Air standard cycles and Fuel air cycles, Variable specific heat and its effects, Dissociation and other losses, Actual cycles, Deviation of actual engine cycle from ideal cycle, TDC, BDC, Torque, Power. Compression Ignition Engines Combustion phenomenon in C I engines, Stages of combustion, Delay period, Knocking, Pressure-Crank angle diagram, Factors affecting combustion and knocking, Types of combustion chambers. Spark Ignition Engines Combustion: Combustion phenomenon in SI Engines, Ignition delay, Flame propagation, Pressure-Crank angle diagram, Abnormal combustion, Auto ignition, Detonation and Knocking, Factors affecting combustion and detonation, Types of combustion chambers	9
II	Fuel System – SI Engines: Theory of carburetion, Simple carburettor, Essential parts of modern carburettor, Types of carburettors, Types of fuel injection systems in SI engines, Continuous injection system, Timed injection system, Electronic Fuel Injection systems (EFIs)/MPFi, Working of Sensors, Functions of ECU in Petrol Engine. Spark Plug and its requirements, Battery, Magneto, Electronic ignition systems. GDI Technology, Turbo in Petrol Engines. Fuel System – CI Engines: Fuel Injection Systems: Unit Pump, Inline Pump, Rotary Pump, Engine Governors: necessity and characteristics, Types of nozzle, Electronic Diesel Control, CRDi Technology, System Layout, Function of ECU in diesel engine, Working of Sensors, Turbocharger and its types, VGT, Twin-turbo.	9
III	Engine lubrication: Types of lubricants and their properties, SAE rating of lubricants, Types of lubrication systems, Engine Cooling: Necessity of engine cooling, disadvantages of overcooling, Cooling systems and their comparison: Air cooling, Liquid cooling, Supercharging/Turbo-charging: Objectives, Effects on power output and engine efficiency Engine Testing and Performance: Measurement of Break Horse Power,	9

	Indicated Power, Fuel Consumption, Air flow, BMEP, Performance characteristic of SI and CI Engines, Effect of load and Speed on mechanical, indicated thermal, break thermal and volumetric efficiencies, Heat balance sheet	
IV	After-treatment technologies: -Working of Catalytic Converter & its types, SCR, DPF, DOC, POC, LNT.Exhaust Emissions:Homologation, Emission Standards, Applicable Standards in India, Future Norms, and Significance of Fuel in meeting emissions. Classification of Segments, Emission Test Cycles, COP, Emission Measurement Techniques, On board Diagnosis, OBDI, OBDII. Alternate Fuels: Alcohol - Hydrogen - Natural Gas and Liquefied Petroleum Gas – Biodiesel- Biogas Properties - Suitability - Engine Modifications - Merits and Demerits as fuels.	9

ME-404: TURBO MACHINES

Teaching Scheme			Credit	Marks			Duration of End semester Examination
L	T	P/D	C	Sessional	End Semester	Total	
3	1	0	4	40	60	100	3Hrs

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Impact of Jets and Water Turbines Impact of jet on flat and curved plates Types of hydro turbines - impulse and reaction, definition of various turbine parameters like gross head, discharge, work done, input power, output power, efficiencies etc., Euler's equation applied to a turbine, turbine velocities and velocity triangles, expression for work done. Pelton Turbine: Components of Pelton turbine, definition of design parameters like speed ratio, jet ratio, and estimation of various parameters like head, discharge, and efficiency etc., determination of number of buckets, Performance Characteristic curves.	9
II	Reaction Turbines: Types of reaction turbines – Francis Turbine, Kaplan Turbine, inward and outward flow, radial mixed and axial; elements of the turbine, estimation of various working and design parameters, Performance Characteristic curves of reaction turbines Similarity relations in turbines: definition of unit quantities and specific quantities, selection of turbines, Cavitation in turbines - causes, effects and remedies, Thomas cavitation parameter, specific speed graphs, Determination of safe height of installation for the turbine, Draft Tube, types of draft tube, governing of turbines.	9
III	Centrifugal Pumps: Classification, velocity vector diagrams and work done, hydraulic and manometric efficiency, vane shape, head capacity relationship and pump losses, pressure rise impeller, minimum starting speed, multi-stage pumps, Similarity relations and specific speed, net positive suction head, cavitation and maximum suction lift, performance characteristics. Reciprocating Pumps: Construction and operational details, discharge coefficient, volumetric efficiency and slip, work and power input, effect of acceleration and friction on indicator diagram (pressure – stroke length plot) air vessels and their utility. Centrifugal v/s reciprocating pumps.	9
IV	Centrifugal fans - Blowers and Compressors - construction details - Inducers – Backward and Radial blades - Diffuser - volute casing stage work - Stage pressure rise – Stage pressure co-efficient - Stage efficiency - Degree of reaction - Various slip factors H-S diagram for centrifugal compressor.	9

	Axial flow Fans and Compressors –Construction detail - Stage velocity triangles - Blade loading and flow coefficient - Static pressure rise - H-S diagram - Degree of reaction - Work done factors -Free and Forced Vortex flow performance - Stalling and Surging

HS-410: LAW FOR ENGINEERS

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	0	0	2	40	60	100	3 hrs

COURSE OBJECTIVE:

- To familiarize students (Prospective engineers) with elementary knowledge of laws that would be of utility in their profession.
- To familiarize students with the constitution of India and laws in new areas viz. IPR, ADR, Human Rights, Right to Information, Corporate law, Law relating Elections and Gender Studies.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Constitutional Law: Nature of Indian Constitution (features), fundamental rights, duties and directive Principles of State Policy (DPSP's), forms of Governments, structure of Government of India, role and responsibility of executive, legislature/parliament and judiciary, nature of Indian federal system, center state and relations. Basic structure of the Indian constitution, basic features of the Indian, constitutional amendments - GolakNath, KeshwanandaBharti, Maneka Gandhi (1978) and S.R. Bommai case (1994), (floor test).	6
II	Law of contract: General principles of Indian Contract Act, 1862, kinds of Government contracts and dispute settlement, standard and printed form of contract, essential elements of valid contract proposal, acceptance communication and revocation thereof, relevance of time in contractual obligation. Main objectives of Arbitrates and Conciliation Act-1996, tort and law of tort, general principles of tort law, classifications of torts: property vs. person.	6
III	Administrative Law: Evolution, nature and its scope, conceptual objection against growth of administrative rule of law and separation of power, clarification of administrative actions, judicial review of administrative actions, exclusion of judicial review and concept of "Ombudsman"; Right to Information Act, 2005 (Sub Section 1 - 20) Environmental Law: Definition, meaning and its nature, environmental (Protection) Act-1986, Water (Preservation and Control of Pollution) Act-1974, Air (Prevention and Control of Pollution) Act-1981; Environmental pollution, overall remedies and procedures.	8
IV	Human Rights: Legality of human rights, universal declaration of human rights, 1948, difference between civil and political rights, individual and human rights -	6

	human rights of child, weaker section of society, prisoners, and refugees, International Human Rights Commission.

HS-411: GERMAN LANGUAGE – II

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	0	0	2	40	60	100	3 hrs
Prerequisite							
HS 302: GERMAN LANGUAGE - I							

COURSE OBJECTIVES:

- To enable the students to speak and understand about most of the activities in the day to day life.
- The students will be able to narrate their experiences in Past Tense.
- The students will be able to understand and communicate even with German Nationals.
- By the end of Phase – II the students will have a reasonable level of conversational skills.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Wichtige Sprachhandlungen: Zimmersuche, Möbel Grammatik: Verben mit trennbaren Vorsilben im Präsens und Perfekt. Verben mit trennbaren Vorsilben und Modalverben im Präsens. Verben mit untrennbaren Vorsilben im Perfekt. Unregelmäßige und gemischte Verben im Perfekt.	6
II	Wichtige Sprachhandlungen: Kleidung, Farben, Materialien. Grammatik: formelle Imperativsätze mit “Sie” informelle Imperativsätze Vorschläge mit “wir” – “sollen/wollen wir” – Soll ich? Modalpartikeln “doch” “mal” “doch mal”.	6
III	Wichtige Sprachhandlungen: Sehenswürdigkeiten (Prater, Brandenburger Tor, Kolosseum, Eifelturm). Grammatik: Ortsangaben mit Akk. Und Dativ “alle”, “man” Indefinite pronomen “etwas”, “nichts”.	6
IV	Wichtige Sprachhandlungen: Essen und Trinken im Restaurant, Partyvorbereitung und Feier. Grammatik: Nomen aus Adjektiven nach “etwas” und “nichts” Nomen aus dem Infinitiv von Verben, zusammengesetzte Nomen und ihre Artikel.	6

	Adjektiveim Nom.undAkk.nachunbestimmten Artikel, Negativartikel und Possessivartikel

HS-412: FRENCH LANGUAGE - II

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	0	0	2	40	60	100	3 hrs
Prerequisite							
HS 303: FRENCH LANGUAGE - I							

COURSE OBJECTIVES:

- To enable the students communicate effectively with any French speaker
- To enable students to access information on the internet, send e mails, pass level 1 exam conducted by Alliance Française de Madras.
- To enable students to enhance their lexical and technical competence and have a competitive edge in the international market. By the end of Phase – II the students will have a reasonable level of conversational skills.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Grammar and Vocabulary: The second group verbs: Finir, rougir, grossir, grandir. “Les preposition de temps”: à, en, le, de 7h à 8h, jusqu’ à, vers. Listening and Speaking – the semi- vowels: Voilà, pollutant. Writing - the days of the week, months, technical subjects, time, “les spécialitésscientifiques et l’ année universitaire, paragraph writing about time table. Reading: Reading of the text and comprehension – answering questions.	6
II	Grammar and Vocabulary – The adjectives, the nationality, feminine & masculinenoun forms “les métiersscientifiques”. Listening and Speaking – Vowels: soirée, année, près de, très. Writing: Countries name, nationality, “les métiersscientifiques”, numbers from: 69 to infinitive and some measures of unit. Reading Comprehension: reading a text.	6
III	Grammar and Vocabulary – near future, The demonstrative adjectives, Express the aim by using the verb, Listening and Speaking – “La liaison interdite – enhaut”. Writing – some scientific terms, French expressions to accept an invitation. Sentence framing. Reading Comprehension – reading a text.	6
IV	Grammar and Vocabulary – the verbs: manger, boire, the partitive articles Listening and Speaking – “le ‘e’ caduc Writing- the food, the ingredients, fruits, vegetables, expression of quantity, paragraph writing about food habits. Reading – reading a text.	6

ME-405: I.C. ENGINE LAB

Teaching Scheme			Credits	Marks			Duration End Semester Examination
L	T	P/D	C	I.A.	ESE	Total	
0	0	2	1	30	20	50	3 hrs

Experiments as per the topics in the syllabus for the course ‘Analog Electronics Lab’ will be conducted in the laboratory class. Following is the list of experiments out of which 8-9 experiments must be performed during the semester:

List of Experiments:

1. To study the construction details of 2 Stroke and 4 Stroke Engines.
2. To study the valve timing diagram of engine. (4 stroke petrol/diesel engine)
3. To perform Morse Test on engine(4 stroke petrol/diesel engine)
4. To perform Speed Test on engine (4 stroke petrol/diesel engine)
5. To perform Load Test(Rope Brake/Eddy Current/hydraulic dynamometer) on engine (4 stroke petrol/diesel engine)
6. To perform Heat Balance test on engine (4 stroke petrol/diesel engine)
7. To perform experimental determination of Air fuel ratio and volumetric efficiency of the engine (4 stroke petrol/diesel engine)
8. To study the effects of Supercharging/turbo charging on Performance Characteristics of an engine (4 stroke petrol/diesel engine)
10. To study the difference between Carburetors based fuel system & EFI.
11. To study the difference between Inline Pump, Rotary Pump &CRDi System for a four cylinder diesel engine.
11. To study the effect of Injection Timing & Pressure on Single Cylinder Diesel Engine using Open ECU & perform Exhaust Gas/Smoke analysis of engine.
12. To study the effect of Spark Timing & Lambda on Single Cylinder Petrol Engine using Open ECU & perform Exhaust Gas/Smoke analysis of engine.
13. To study the construction details of Ignition system (Battery, Magneto, Electronic).

ME-406: TURBO MACHINES LAB

Teaching Scheme			Credits	Marks			Duration End Semester Examination
L	T	P/D	C	I.A.	ESE	Total	
0	0	2	1	30	20	50	3 hrs

Experiments as per the topics in the syllabus for the course ‘Analog Electronics Lab’ will be conducted in the laboratory class. Following is the list of experiments out of which 8-9 experiments must be performed during the semester:

LIST OF EXPERIMENTS:

1. To study the constructional details of a Pelton turbine and draw its fluid flow circuit.
2. To draw the performance characteristics of Pelton turbine constant head, constant speed and constant efficiency.
3. To study the constructional details of a Francis turbine and draw its fluid flow circuit.
4. To draw the constant head, constant speed and constant efficiency performance characteristics of Francis turbine.
5. To study the constructional details of a Kaplan turbine and draw its fluid flow circuit.
6. To draw the constant head, speed and efficiency curves for a Kaplan turbine.
7. To study the constructional details of a Centrifugal Pump (rated variable speed) and draw its characteristic curves.
8. To study the constructional details of a Reciprocating Pump and draw its characteristic curves.
9. To study the constructional details of a Hydraulic Ram and determine its various efficiencies.
10. To study the constructional details of a Centrifugal compressor.
11. To study the constructional details of a submersible Pump and draw its characteristic curves.

ME-407: MANUFACTURING PRACTICE LAB-I

Teaching Scheme			Credits	Marks			Duration	End
L	T	P/D	C	I.A.	ESE	Total	Semester Examination	
0	0	3	2	30	20	50	3 hrs	

Experiments as per the topics in the syllabus for the course ‘Analog Electronics Lab’ will be conducted in the laboratory class. Following is the list of experiments out of which 8-9 experiments must be performed during the semester:

LIST OF EXPERIMENTS:

1. To make a pattern for a given casting with all the necessary allowances, parting line, running system details. Prepare the mould and make the casting. Investigate the casting defects and suggest the remedial measures.
2. To prepare the Aluminium Metal Matrix Composites using permanent mould casting and study the physical, mechanical characteristics and microstructure using metallurgical Microscope.
3. To prepare the Aluminium Metal Matrix Composites using centrifugal casting and study the physical, mechanical characteristics and microstructure using metallurgical Microscope.
4. To study design for welding and make a component involving horizontal and vertical welding and study the welding defects and suggests their remedies.
5. To make a component involving horizontal /vertical welding and determine the weld quality using destructive testing such as tension test/ bend test/fracture toughness test.
6. To make a component involving horizontal and vertical welding and determine the weld quality using Non-destructive testing such as liquid-penetrant/Ultrasonic testing/magnetic particles/radiographic tests.
7. To study design for brazing, soldering and perform the soldering and brazing operations of metals.
8. To perform the MIG/TIG operation on metals and determining the strength of weld using UTM.
9. To study design for mechanical fastening and perform joining of sheet metal by riveting.
10. Development and manufacturing of complex sheet metal components such as funnel etc.
11. To prepare the plastic composites using hand layup technique and study of physical, mechanical characteristics and microstructure.

SEMESTER-V

ME-501: KINEMATICS OF MACHINES

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	2	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: Mechanism and machines, kinematics links, kinematic pairs, kinematic chains, plane and space mechanism, kinematic inversion, equivalent linkages, four link planar mechanisms, straight line mechanisms, steering mechanisms, pantograph. Kinematic Analysis of Plane Mechanisms: Displacement analysis, general plane motion, instantaneous center of velocity, graphical and analytical methods of velocity and acceleration analysis.	6
II	Cams: Classification of cams and followers, disc cam nomenclature, construction of displacement, velocity and acceleration diagrams for different types of follower motions, analysis of follower motions, determination of basic dimension, synthesis of cam profile by graphical approach, cams with specified contours, tangent and circular arc cams.	6
III	Belt, Rope and Chain drives: Introduction to belts, ropes, law of belting, design of belt drives, flat & v-belt drives, conditions for transmission of max. Power Gears: Introduction, terminology, various types of gears and applications, fundamental law of gearing, Gear profile, involute, cycloidal, interference and undercutting. Spur gear: Path of contact, arc of contact, minimum teeth to avoid interference, introduction to helical, spiral bevel and worm gears. Synthesis of simple, compound and reverted gear trains, analysis of epicyclic gear trains.	6
IV	Kinematic synthesis of Mechanisms: Type, number and dimensional synthesis, function generation, path generation and body guidance two and three position synthesis of four bar and slider crank by graphical and analytical methods, Freudenstein's equation precision position, structural error, Chebychev spacing, transmission angle.	6

Text Books:

ME-502: MANUFACTURING TECHNOLOGY-II

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Metal Cutting & Tool Forces: Introduction, basic tool geometry, single point tool nomenclature, mechanism of metal cutting: deformation of metal during machining, mechanics of chip formation, built-up edges, mechanics of orthogonal and oblique cutting, merchant cutting force circle and shear angle relationship in orthogonal cutting, surface finish, factors affecting tool forces. Relationships and Economics of Machining: Relationship of velocity, forces, and power consumption, cutting speed, feed, and depth of cut. Temperature distribution at tool chip interface. Economics of metal machining, introduction, elements of machining cost, tooling economics, machining, optimization, numericals.	9
II	Cutting Tool Materials & Tool Life: Characteristics of tool materials, various types of cutting tool materials, coated tools, cutting tool selection, tool life relationship-taylor equation, types of tool wear, tool life, factors governing tool life, purpose and types of cutting fluids, basic actions of cutting fluids, selections of cutting fluid, effect of cutting fluid on tool life, definition of machinability and its evaluation, economics of machining, numericals. Gear Manufacturing: Introduction, methods of manufacturing, gear generation and forming: gear cutting by milling, single point form tool, gear hobbing and shaping, gear finishing operations: gear shaving, gear burnishing, gear grinding, lapping.	8
III	Jigs & Fixtures: Principles of locations, locating and clamping devices, jigs, bushes, drilling jigs, milling fixtures, turning fixtures, boring and broaching fixtures, welding fixtures, different materials for jigs and fixtures, economics of jigs and fixtures. Press Working Tools & Dynamometry: Introduction, classifications of presses and dies, shear action in die cutting operations, centre of pressure, mathematical calculation of centre of pressure, clearances, cutting forces, punch dimensioning, need for measuring forces, basic	9

	requirements of measuring techniques, design requirements of dynamometers, 3-divisional turning dynamometer and its calibration, drill dynamometers.	
IV	Abrasive Processes: Introduction, grinding wheel-designation and selection, types of grinding machines, grinding processes, grinding processes parameters, creep feed grinding, honing, lapping, other finishing processes. other machine tools: sawing, broaching. Unconventional Machining Processes: Need for unconventional processes, types of unconventional machining processes, usm: ultrasonic machining, ecm: electrochemical machining, edm : electrical discharge machining, lbm: laser beam machining their process parameters, principle of metal removal, applications, advantages, and limitations.	8

ME-503: HEAT TRANSFER

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	1	0	4	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Steady State Heat Conduction: Introduction, 1-dimensional heat conduction through a plane wall, long hollow cylinder, hollow sphere, conduction equation in cartesian, polar and spherical co-ordinate systems. steady state conduction with heat generation: introduction, 1 – dimensional heat conduction with heat sources, extended surfaces (fins), fin effectiveness 2-dimensional heat conduction.	8
II	Transient Heat Conduction: systems with negligible internal resistance, biot number, transient heat conduction in plane wall, cylinders, spheres with convective boundary conditions, hiesler chart solution, relaxation method. Convection: Forced convection – Thermal and hydro-dynamic boundary layers, equation of continuity, momentum and energy equations, flow over a flat plate and flow through tube, fluid friction and heat transfer (colburn analogy), free convection from a vertical flat plate, empirical relations for free convection from vertical and horizontal of planes and cylinders.	9
II	Thermal Radiation: Introduction, Stefan-Boltzmann law, Wien Displacement Law, Kirchoff's Law, concept of black body and grey body, black body radiation, shape factors and their relationships, heat exchange between non-black bodies, equivalent electrical network for radiative exchange in an enclosure of two or three gray bodies, radiation shields.	9
IV	Heat Exchangers: Introduction, classification, fouling factor, overall heat transfer coefficient, analysis of a parallel/counter flow heat exchanger, heat exchanger effectiveness, LMTD, NTU effectiveness method.	8

Text Books:

1. F.P. Incropera, & D.P. Dewitt, “*Fundamentals of Heat and Mass Transfer*”, Wiley 2013

3. S.K. Som, “*Introduction to Heat Transfer*”, Prentice Hall India Learning Private Limited, 2008.

ME-504: MACHINE DESIGN-I

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	1	0	4	40	60	100	3 hrs.

Note:

- (1) *Design Data Book Compiled by PSG College of Engineering & Technology, Coimbatore*, is permitted to be used during the Examination.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: To machine design, design process and design creativity, types of design, design synthesis, principles of design in aesthetics and ergonomics, standards in design, concurrent engineering, mechanical properties of the commonly used engg. materials, basic criteria of selection of materials, factor of safety under different loading conditions, concept of tearing, shearing, crushing, bending etc. Principles of design: B.I.S. system of designation of steel, B.I.S System of designation of C.I. B.I.S system of fits & tolerances, standardization and inter-changeability, design considerations of casting, forging and machining, different types of fluctuating / variable stresses, study of stress concentration, concept of fatigue and endurance strength, fatigue design for finite and infinite life against combined variable stress using Goodman and Soderberg's criterion, design for static loading, design for manufacture and assembly (DFMA).	9
II	Shafts and Keys : Design of shafts subjected to twisting moment, bending moment and combined bending and twisting, shafts subjected to fluctuating loads, design of shafts on basis of rigidity, design of hollow shafts, flexible shafts, critical speed of shafts, design of different types of keys, splines.	8
III	Riveted joints: Methods of riveting, rivet materials, caulking and fullering, design of rivets for boiler joints, eccentrically loaded riveted joints, Welded joints: weld, design for various loading conditions in torsion, shear or direct load, eccentrically loaded welded joints.	8
IV	Cotter and knuckle joints: comparison between keys and cotters, design of socket and spigot cotter joint, gib and its use, gib and cotter joint, design procedure for knuckle joint.	9

	Pipe joints: Introduction, stresses in pipes, designing of pipes, hydraulic pipe joint for high pressures, steam pipes, steam pipe fittings, oil piping.

ME-505: AUTOMOBILE ENGINEERING

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction to Automobiles: Classification, components, requirements of automobile body: vehicle frame. types, front engine rear drive & front engine front drive vehicles, four wheel drive vehicles. Clutches: Introduction to clutches, requirement of clutches – principle of friction clutch – wet type & dry types: single plate clutch, multi plate clutch, centrifugal clutches, clutch linkages.	8
II	Power Transmission: Object of the gear box, different types of gear boxes, sliding mesh, constant mesh, synchromesh gear boxes, drive lines, universal joint, propeller shaft, slip joint, front wheel drive, principle, function, construction & operation of differential, rear axles, types of load coming on rear axles, full floating, three quarter floating and semi floating rear axles.	9
III	Suspension Systems: Need of suspension systems, types of suspension, factors influencing ride comfort, leaf springs, shock absorber. Steering System: Front wheel geometry & wheel alignment viz. caster, camber, king pin inclination, toe-in/toe-out, conditions for true rolling motions of wheels during steering: different type of steering gear boxes, steering linkages and layout, rack & pinion power steering gear.	9
IV	Automotive Brakes, Tyres & Wheels: classification of brakes, principle and construction details of drum brakes, disc brakes, mechanical, hydraulic, pneumatic brakes, power assisted brakes, tyres of wheels, types of tyre & their constructional details, tyre rotation, excessive tyre wear & their causes. Automotive Electricals: Purpose & operation of lead acid battery, capacity rating. purpose and operations of the starting system, and charging system.	8

ME-506: MATERIALS TECHNOLOGY

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Materials: Resources and their implications, materials and their applications in engineering. Solid Solutions and Phase diagram: Introduction and types of solid solutions, importance and types of phase diagram, systems, phase and structural constituents, cooling curves, Gibb's phase rule, lever rule, definition of eutectic, eutectoid, peritectic and peritectoid systems, iron carbon equilibrium diagram and TTT diagram.	7
II	Heat Treatment: Purpose and classification of heat treatment processes, annealing normalizing, stress relieving, hardening, tempering, carburizing, nitriding, cyaniding, flame and induction hardening. properties of micro-constituents like austenite, ferrite, pearlite, martensite. Deformation of Metals: Elastic and plastic deformation, mechanism of plastic deformation, twining, conventional and true stress strain curves for polycrystalline materials, yield point phenomena, strain hardening, age hardening work hardening, Bauschinger effect, recovery, recrystallization and grain growth.	9
III	Mechanical Behavior of Materials: Types of polymers, ceramics, composites, and glasses, mechanical behavior of polymers, ceramics, composites, and glasses, mechanical testing of materials. Alloys and alloying elements: Effect of various alloying elements on the mechanical properties. properties of important alloys used in mechanical engineering practice.	9
IV	Failures of metals: Failure analysis, fracture- process & its types and their characteristics, brittle fracture theories, cleavage fracture, methods to improve fracture strength, fatigue and characteristics of fatigue. Creep & Corrosion: Definition and concept, creep curve, mechanism of creep, impact of time and temperature on creep, creep fracture, creep	9

	testing and prevention against creep. corrosion: introduction, types of corrosion, mechanism and effect of corrosion, prevention of corrosion.

ME-511: DESIGN AND SIMULATION LAB

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
0	0	3	2	30	20	50	3 hrs.

Suggested List of Experiments

Software to be used (all latest versions): NX Siemens, and/or Solid Edge, and/or ANSYS, and/or FLUENT and/or Solid Works, and/or Pro-E(Creo), and/or open form software, etc.

1. **To Design** a pattern for a given casting with all the necessary allowances, parting line, running system details.
2. **To Simulate** the pouring of different metals and predict casting defects and suggest the remedial measures.
3. **To Design** a real life industrial component involving horizontal and vertical welding and compare the designs to suggest better design for production.
4. **To simulate** the material behaviour while cutting different types of external threads on different materials (ductile/brittle).
5. **To Design and Simulate** and assembly of a real life industrial unit consisting of 2 to 3 components to have the concept of tolerances and fits (shaft and bush assembly or shaft, key and bush assembly or any suitable assembly).
6. **To design** and show Dis-assembly and assembly of small parts such as tail stock, bench vice, screw jack etc.
7. **To design** various complex sheet metal components such as funnel etc.
8. **To simulate** the effects of using different tools, work piece materials, coolants, in turning operations on different materials.
9. **To simulate** the effects of using different tools, work piece materials, coolants, in Drilling operations,
10. **To simulate fluid behaviour and aerodynamic profile studies** through various types of real world applications like aircraft, aerofoil, car, etc.

ME-512: MANUFACTURING PRACTICE LAB-II

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
0	0	2	1	30	20	50	3 hrs.

Suggested List of Experiments (on conventional, and CNC machines):

1. To make a pattern for a given casting with all the necessary allowances, parting line, running system details. Prepare the mould and make the casting. Investigate the casting defects and suggest the remedial measures.
2. To make a component involving horizontal and vertical welding and study the welding defect and suggests their remedies.
3. To prepare a job on surface grinder/cylindrical grinder and measure the various parameters of the finished piece.
4. To cut external threads on a lathe/CNC machine
5. To create an assembly of a unit consisting of 2 to 3 components to have the concept of tolerances and fits (shaft and bush assembly or shaft, key and bush assembly or any suitable assembly).
6. Creating rectangular block of given size using shaper/milling, then creating gear teeth through indexing device on milling machine.
7. Levelling of machine tools and testing their accuracy.
8. Practising disassembly and assembly of small assemblies such as tail stock, bench vice, screw jack etc.
9. Development and manufacture of complex sheet metal components such as funnel etc.
10. Multi slot cutting on milling machine by indexing.
11. Drilling and boring of a bush on drilling machine/CNC.

ME-513: HEAT TRANSFER LAB

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
0	0	2	1	30	20	50	3 hrs.

Suggested List of Experiments

1. To determine the thermal conductivity of a metallic rod.
2. To determine the thermal conductivity of an insulating powder.
3. To determine the thermal conductivity of a solid by the guarded hot plate method.
4. To find the effectiveness of a pin fin in a rectangular duct natural convective condition and plot temperature distribution along its length.
5. To find the effectiveness of a pin fin in a rectangular duct under forced convective conditions and plot temperature distribution along its length.
6. To determine the surface heat transfer coefficient for a heated vertical tube under natural convection and plot the variation of local heat transfer coefficient along the length of the tube. Also compare the results with those of the correlations.
7. To determine the average heat transfer coefficient for an externally heated horizontal pipe under forced convection and plot Reynolds and Nusselt numbers along the length of pipe. Also compare the results with those of the correlations.
8. To measure the emissivity of the grey body (plate) at different temperature and plot the variation of emissivity with surface temperature.
9. To find overall heat transfer coefficient and effectiveness of a heat exchange under parallel and counter flow conditions. Also plot the temperature distribution in both the cases along the length of heat of heat exchanger.
10. To verify the Stefan-Boltzmann constant for thermal radiation.

Open Elective-III

ME-508: ROBOTICS

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	0	0	2	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Robotic manipulation: Automation and robots classification – drive technologies work-envelope geometries, motion control method, application: robot specifications – no. of axes, capacity and speed, reach and stroke, tool orientation, repeatability, precision, accuracy, operating environment.	6
II	Direct kinematics: The arm equation homogenous co-ordinates – frames, translation and rotations, composite homogenous transformations, screw transformations, link co-ordinates, the arm equation, a five-axis articulated robot, a four-axis SCARA robot, a six-axis articulated robot. Inverse kinematics: Solving the arm equation: the inverse kinematics problem general properties of solutions, tool configuration, inverse kinematics of a five-axis articulated robot, four-axis SCARA robot, six-axis articulated robot and three-axis planar articulated robot.	6
III	Work space analysis and trajectory planning: work space analysis, work envelope of a five axis articulated robot, work envelope of a four axis SCARA robot, work space fixtures, The pick and place Operation, Continuous path motion, Interpolated motion, straight line motion. Differential motion and statics: the tool configuration Jacobian matrix, joint space singularities, generalised inverses, resolved motion rate control, $n > 6$, rate control of redundant robots: $n > 6$: rate control using (1)–inverse, the manipulator jacobian.	6
IV	Manipulator dynamics: Lagrange equation, kinetic & potential energy, generalized force, Lagrange-Euler dynamic model, dynamic model of a two axis planar articulated robot and a three axis SCARA robot, direct & inverse dynamic recursive Newton – Euler formulation, dynamic model of a one axis robot. Robot control: The control problem, state equations, constant solutions,	6

	linear feedback system, single axis PID control, PD gravity control, computer – torque control, variable structure control, impedance control.

UNIT	CONTENT	No. of Hrs.
I	Introduction to Automobiles: Classification, components, requirements of automobile body: vehicle frame. types, front engine rear drive & front engine front drive vehicles, four wheel drive vehicles. Clutches: Introduction to clutches, requirement of clutches – principle of friction clutch – wet type & dry types: single plate clutch, multi plate clutch, centrifugal clutches, clutch linkages.	6
II	Power Transmission: Object of the gear box, different types of gear boxes, sliding mesh, constant mesh, synchromesh gear boxes, drive lines, universal joint, propeller shaft, slip joint, front wheel drive, principle, function, construction & operation of differential, rear axles, types of load coming on rear axles, full floating, three quarter floating and semi floating rear axles.	6
III	Suspension Systems: Need of suspension systems, types of suspension, factors influencing ride comfort, leaf springs, shock absorber. Steering System: Front wheel geometry & wheel alignment viz. caster, camber, king pin inclination, toe-in/toe-out, conditions for true rolling motions of wheels during steering: different type of steering gear boxes, steering linkages and layout, rack & pinion power steering gear.	6
IV	Automotive Brakes, Tyres & Wheels: Classification of brakes, principle and construction details of drum brakes, disc brakes, mechanical, hydraulic, pneumatic brakes, power assisted brakes, tyres of wheels, types of tyre & their constructional details, tyre rotation, excessive tyre wear & their causes. Automotive Electricals: Purpose & operation of lead acid battery, capacity rating. purpose and operations of the starting system, and charging system.	6

Text Books:

1. Dr.Kirpal Singh, “*Automobile Engineering (Vol. 1 & Vol. 2)*”, Standard Publishers Distributors, Delhi.
2. WilliamH.Crouse, “*Automotive Mechanics*”, McGraw-Hill Higher Education
3. S.K. Gupta, “*A Textbook of Automobile Engineering*”, S. Chand

Reference Books:

1. S.Srinivasan, “*Automotive Mechanics*”, McGraw Hill Education.
2. Joseph Heitner, “*Automotive Mechanics – Principles and Practices*”, CBS Publishers.
3. Anthony E. Schwaller, “*Motor Automotive Technology*”, S. Chand(G/L) & Company Ltd.
4. K Ramakrishana, “*Automobile Engineering*”, PHI Learning Private Limited.

ME-510: VALUE ENGINEERING**Teaching and Examination Scheme:**

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	0	0	2	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Value Engineering Concepts: Advantages, applications in product development, process improvement, service improvement and system design, problem recognition, role in productivity, criteria for comparison, elements of choice.	6
II	Analysis of Functions: Anatomy of function, values: use, antique, cost, esteem and exchange, primary versus secondary versus tertiary/unnecessary functions, functional analysis: function analysis system technique and quantitative evaluation of ideas, case studies.	6
III	Value Engineering Techniques: Selecting products and operations for VE action, timing, VE programmes, determining and evaluating functions, assigning rupee equivalents, developing alternate means to required functions, decision making for optimum alternative, use of decision matrix, make or buy decisions, measuring profits, reporting results and follow up.	6
IV	Implementation and Management of Value Engineering: Action plan, record progress, report progress, review meetings, problems in implementation, human factors. Level of VE in the organization, size and skill of VE staff, small plant VE activity management supports, Audit of savings.	6

Text Books:

1. Lawrence D. Miles, “*Techniques of Value Analysis and Engineering*”, Eleanor Miles Walker, 1989
2. Richard Park, “*Value Engineering : A Plan for Invention*”, CRC Press
3. J.V. Michael, and W.P.Wood, “*Design to Cost*”, Wiley Interscience, 2004

Reference Books:

1. H.G. Tufty, “*Compendium on Value Engineering*”, The Indo American Society 1983
2. G. Jagannathan, “*Getting More at Less Cost*”, Tata McGraw-Hill Education.

SEMESTER-VI

ME-601: COMPUTER AIDED DESIGN AND MANUFACTURING (CAD/CAM)

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	1	0	4	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction to CAD/CAM: Historical development, industrial look at CAD/CAM, introduction to CIM, design process, introduction to CAM/ CIMS, Importance and Necessity of CAD, applications of CAD, hardware and software requirement of CAD Geometric and Wire Frame Modeling: Basic introduction of geometric and solid modeling coordinate systems. 2-D and 3-D wire frame models, hardware for drafting packages, command and menu driven software, features of a drafting package, drawing utilities, entities, edit commands, blocks and symbols, viewports.	8
II	Curves, Surfaces and Solids: Algebraic and geometric forms, tangents and normal, blending functions re-parametrization, straight lines, conics, cubic splines, Bezier curves and B-spline curves. Ruled surface, surface of revolution, tabulated cylinder, bi-cubic surface, Bezier surface, B-spline surface, Transformations: Introduction, transformation of points and line, 2-D rotation, reflection, scaling and combined transformation, homogeneous coordinates, 3-D scaling, shearing, rotation, reflection and translation, combined transformations.	9
III	Solid Modeling: Solid models and representation scheme, boundary representation, constructive solid geometry, sweep representation, cell decomposition. Automation and Numerical Control: Introduction, fixed, programmable and flexible automation, types of NC systems, MCU and other components, NC manual part programming, coordinate systems, G & M codes, part program for simple parts, computer assisted part programming.	9
IV	Group Technology (GT): Part families, part classification and coding,	8

	production flow analysis, machine cell design, advantages of GT.	
	Flexible Manufacturing Systems & Computer aided process planning: Introduction, FMS components, types of FMS, FMS layouts, planning for FMS, advantages and applications conventional process planning, types of CAPP, steps in variant process planning, planning for CAPP. finite element method: introduction, basic procedure.	

Text Books:

1. Mikell P. Groover and Emory W. Zimmers Jr., “**CAD/CAM**”, Prentice Hall of India.
2. P. Radhakrishnan and G.P. Kothandaraman, “**CAD/CIM**”, Dhanpat Rai Publications.

Reference Books:

1. Ibrahim Zeid, “**CAD/CAM (Theory & Practice)**”, McGraw Hill Education Pvt. Ltd.
2. Chris McMohan & Jimmie Browne, “**CAD/CAM (Principles, Practice & Manufacturing Management)**”, Addison – Wesley.
3. P.N. Rao, “**AutoCAD14 for Engg. Drawing Made Easy**”, McGraw Hill Education (India) Pvt. Ltd.
4. David F. Rogers and J. Alan Adams, “**Mathematical Elements for computer Graphics**”, McGraw Hill Education Pvt. Ltd.

ME-602: MEASUREMENT AND CONTROL

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	General Concept: Need and classification of measurements and instruments, basic and auxiliary functional elements of a measurement system, mechanical versus electrical/electronic instruments, primary, secondary and working standards. Static and Dynamic characteristics of Instruments: Range and span, accuracy and precision, calibration, hysteresis and dead zone, sensitivity and linearity, threshold and resolution: speed of response, lag, fidelity and dynamic error, dead time and dead zone. zero, first and second order systems and their response to step, ramp and sinusoidal input signals. error in measurement: sources of errors, systematic and random errors: statistical analysis of test data.	8
II	Functional Elements: Review of Electro-mechanical sensors and transducers – variable resistance, inductance and capacitive pickups, photo cells and piezo-electric transducers, and application of these elements for measurement of position/displacement, speed/velocity/acceleration, force and liquid level etc. Strain Gauges: Resistances strain gauges, gauge factor, bonded and unbonded gauges, surface preparation and bonding technique, signal conditioning and bridge circuits, temperature compensation, application of strain gauges for direct, bending and torsional loads.	9
III	Pressure and Flow Measurement: Bourdon tube, diaphragm and bellows, vacuum measurement – Mcleod gauge, thermal conductivity gauge and ionisation gauge, dead weight gauge tester. Electromagnetic flux meters, ultra-sonic flow meters and hot wire anemometer: Flow visualisation technique. Temperature Measurement: Thermal expansion methods – bimetallic thermometers, liquid-in-glass thermometer and filled-in-system thermometers, thermo-electric sensors-common thermo couples, reference junction considerations, special materials and configurations:	8

	metal resistance thermometers and thermistors, optical and radiation pyrometers, calibration, standards.	
IV	Speed, Force, Torque and Shaft Lower Measurement: Mechanical tachometers, vibration and tachometer and stroboscope, proving ring, hydraulic and pneumatic load cells, torque on rotating shafts, absorption, transmission and driving dynamometers. Controls: Control system-open and closed loop system, elements of a control system, servo mechanism process control and regulators, transfer function, block diagram and overall transfer function of a multi loop control system, signal flow graph and Mason's Rule system stability – Routh and Hurwitz criteria stability, Time and frequency domain Nyquist plot for stability study.	9

Text Books:

1. Ernest O. Doebelin, "***Measurement system: Application and Design***", McGraw Hill Higher Education.
2. D.S. Kumar, "***Mechanical Measurement and Control***", Metropolitan Book Co. Pvt. Ltd., New Delhi.
3. Thomas G Beckwith, Roy D Marangoni, John H. Lienhard V , "***Mechanical Measurements***", Pearson Education India

Reference Books:

1. J.P. Holman, "***Experimental Methods for Engineers***", McGraw Hill Education.
2. Benjamin C. Kuo, Farid Golnaraghi, "***Automatic Control System***", Wiley.

ME-603: MACHINE DESIGN-II

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	1	0	4	40	60	100	3 hrs.

Note:

- (1) *Design Data Book compiled by PSG College of Technology, Coimbatore*, India is permitted to be used during the Examination.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Sliding contact Bearings: Functions, classification, Selection of bearing type, types of lubrication – boundary, mixed and hydrodynamic lubrication, properties of lubricants, oil grooves, hydrostatic bearings, gas bearings, bearing characteristic number, critical pressure and heat generation in journal bearing, design procedure of journal bearing, Reynolds's equation, design of pivot and collar bearing.	8
II	Rolling contact bearings: Classification, basic static load rating, basic dynamic load rating, static equivalent load, dynamic equivalent load, load life relationship, reliability, material and manufacture of ball and roller bearings, selection of bearing from manufacturer's catalogue, bearing failure, lubrication of rolling bearings.	9
III	Gears: beam and wear strength of gear tooth- Lewis equation, form or Lewis factor for gear tooth, causes of gear tooth failures, dynamic load on gear- Buckingham equation, force analysis and design of spur, helical, bevel & worm gears including the consideration for maximum power transmitting capacity, gear lubrication.	8
IV	Springs: Types of springs, design for helical springs against tension, compression and fluctuating loads, design of leaf springs, nipping, surging phenomenon in springs. Design of IC engines parts and Crane Hook: Design of cylinder, piston, connecting rod and crankshaft, design of crane hook.	9

Text Books:

- V.B. Bhandari, "*Design of Machine Elements*", McGraw Hill Education (India) Pvt. Ltd., 4th edition.
- R.S. Khurmi, J.K. Gupta, "*Machine Design*", S. Chand & Sons, 2014.

Reference Books:

1. P.C. Sharma and D.K. Aggarwal, "***Machine design***", S K Kataria& Sons.
2. Joseph E Shigley, Charles Mischke, Richard Budynas, Keith Nisbett, "***Mechanical Engg. Design***", (Metric Editions), McGraw Hill Book Co.
3. Steven R. Schmid, Bernard J. Hamrock, Bo Jacobson, "***Fundamentals of Machine Elements***", McGraw Hill Higher Education.

ME-604: OPERATIONS RESEARCH

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	2	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Definition and characteristics of operations research (O.R.), Decision making, Scientific decision making, approach for scientific decision making in O.R., need and limitations of O.R. definition of models, classification of models, construction of models, approximations of O.R. models.	4
II	Allocation Model: Analysis of industrial situations to find characteristics like key decision objective, possible alternatives & restrictions – three categories of allocation type situation to be considered general mathematical formulation for linear programming feasible and optimal solutions. Network Models: Transportation models, methods of finding starting solution Vogel's approximation method to find feasible solution in transportation models, methods for finding optimal solution. assignment model, Hungarian method to find optimal solution in assignment models.	8
III	Introduction to Queuing Theory: Cyclic shortest route models, traveling salesman's problem and branch and bound method to solve it. a cyclic shortest route models and their solution by graphical methods. queuing theory, various types of queuing situations and their solutions. Theory of games introduction, Two-person zero-sum games, the maximum –minimax principle, games without saddle points – mixed strategies, 2 x n and m x 2 games – graphical solutions, dominance property, use of L.P. to games, algebraic solutions to rectangular games.	6
IV	PERT & CPM: Network situations where PERT & CPM can be applied, planning, scheduling & control, work-breakdown structure. (a) PERT Networks: Events and activities, construction of network, forward & backward planning, Fulkerson's rules, optimistic, pessimistic & most likely time estimates, frequency distribution, Mean, variance and standard deviation, expected time and latest occurrence time, definitions of slack and critical path.	6

	(b) CPM Networks: Similarity and differences of CPM and PERT construction of network, earliest event time, float, total float, free float, independent float, contracting the network so as to find an optimum project schedule.	
--	---	--

Text Books:

1. Hamdy A Taha, “**Operations Research : An Introduction**”, Pearson Education India
2. Prem Kumar Gupta, D.S.Hira, “**Operations Research**”, S.Chand Publications.

Reference Books:

1. KantiSwarup, P.K. Gupta, Man Mohan, “**Operations Research**”, Sultan Chand & Sons
2. K. Rajagopal, “**Operation Research**”, PHI Learning Private Limited.

ME-605: THERMAL ENGINEERING**Teaching and Examination Scheme:**

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	2	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Steam Boilers: Boilers and their classification, comparison between fire tube and water tube boilers, essentials of a good boiler. constructional and operational details of locomotive, Babcock-Wilcox, and Lamont boilers, boiler mountings and accessories. Draft type and Heat Balance Sheet: Natural draft from chimney, height of chimney, maximum draft and chimney efficiency, forced draft and induced draft, boiler heat balance Sheet.	5
II	Vapour Power Cycles: Carnot and Rankine vapour cycles, effect of operating conditions on thermal efficiency of Rankine cycle, Rankine cycle with superheat, reheat cycle and regenerative feed heating cycle, binary vapour cycle. Flow Through Nozzles: Velocity and heat drop, mass discharge through a nozzle, critical pressure ratio and its significance, effect of friction and nozzle efficiency, supersaturated flow, nozzles off the design pressure ratio.	7
III	Steam Turbines: Classification, flow through impulse blades, velocity diagram, calculation of power output and efficiency, maximum blade efficiency of single stage impulse turbine, blade friction, compounding of impulse turbine. Flow through impulse reaction blades, degree of reaction, velocity diagram, calculations for power output, stage and overall efficiency, comparison of impulse and impulse reaction turbines. Efficiency and Governing in Steam Turbines: Losses in steam turbines, stage efficiency overall efficiency and reheat factor. Governing of steam turbines, throttle governing, nozzle control governing and by pass governing. Steam for heating and process work, back pressure turbines and pass out turbines.	7
IV	Steam Condensers: Elements of a condensing plant, types of condensers, comparison of jet and surface condensers. Condenser vacuum, air leakage and loss of vacuum, vacuum efficiency and condenser efficiency, Dalton's law and air vapour mixture, air pumps.	5

Text Books:

1. R. Yadav, “*Thermodynamics and Heat Engines, Vol-II*”, Central Publishing House, Allahabad.
2. R.S.Khurmi, “*A textbook of Thermal Engineering*”, S.Chand
3. P.L. Ballaney, “*Thermal Engineering*”, Khanna Publishers.

Reference Books:

1. T.D. Eastop & A. McConkey, “*Applied Thermodynamics for Engineering Technologists*”, Pearson Education.
2. Yunus A. Cengel, Michael A. Boles, “*Thermodynamics – An Engineering Approach*”, McGraw – Hill Education.
3. R.K. Rajput, “*Thermal Engineering*”, Laxmi Publications.

ME-606: DYNAMICS OF MACHINERY

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Static and Dynamic Force Analysis: Static force analysis of planar mechanisms, dynamic force analysis including inertia and frictional forces of planar mechanisms. Balancing of Rotating Components: Static balance, dynamic balance, balancing of rotating masses, two plane balancing, graphical and analytical methods, balancing machines.	8
II	Dynamics of Reciprocating Engines: Engine types, indicator diagrams, gas forces, equivalent masses, inertia forces, bearing loads in a single cylinder engine, crankshaft torque, engine shaking forces. Balancing of Reciprocating Parts: Balancing of single cylinder engine, balancing of multi cylinder, inline, radial and V type engines.	9
III	Governors: Introduction, types of governors, characteristics of centrifugal governors, gravity controlled and spring controlled centrifugal governors, hunting of centrifugal governors. Flywheel & Dynamometers: Introduction, coefficient of fluctuation of energy and speed, design of flywheel – solid disk and rimmed flywheels, types of dynamometers, prony brake, rope brake and band brake dynamometers, belt transmission dynamometer, torsion dynamometer, hydraulic dynamometer.	10
IV	Gyroscope: precession angular motion and gyroscopic couple and their effects on aeroplane, ship during steering, rolling and pitching. Stability of four wheel vehicles moving on curved paths. Vibration: Single degree of freedom system, free and forced vibrations, spring-mass system, spring-mass damper system, logarithmic decrement.	7

Text Books:

1. Amitabha Ghosh, Ashok Kumar Mallik, “*Theory of Mechanisms and Machines*”, 3rd Edition, Affiliated East West Press.
2. S.S. Rattan, “*Theory of Machines*”, McGraw Hill Education (India) Pvt. Ltd.
3. S.S. Rao, “*Mechanical Vibrations*”, Addison Wesley.

Reference Books:

1. Joseph Edward Shigley, John Joseph Uicker Jr., “*Theory of Machines and Mechanisms*”, McGraw Hill Education Pvt. Ltd.
2. J.S.Rao and R.V.Dukkipati, “*Mechanism and Machine Theory*”, New Age International.
3. V.P.Singh, “*Theory of Machines*”, Dhanpat Rai Publications.

ME-611: COMPUTER AIDED DESIGN AND MANUFACTURING (CAD/CAM) LAB

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
0	0	2	1	30	20	50	3 hrs.

Suggested List of Experiments:

1. To introduce the concept of calibration, scale in images, importing and exporting different CAD/CAM file types from one software to another software.
2. Manual part programming using G and M codes for Turning, Step turning, Taper turning, multiple turning, Facing, Multiple facing, thread cutting and radius turning on cylindrical components.
3. CNC Milling program involving linear motion and circular interpolation.
4. CNC Milling program involving contour motion and canned cycles.
5. CNC Milling program involving Pocket milling
6. Diagnosis and trouble shooting in CNC machine
7. CNC code generation using any CAM software.
8. Simulation of machining operations using any CAM software.
9. Route sheet generation using CAM software.
10. Study and practical demonstration of Modern Manufacturing Methods like Wire-Cut EDM, ECM, USM, AJT, LBM, etc.
11. Study and practical demonstration on Coordinate measuring machine,
12. Study and practical demonstration on Vertical Machining centre and Horizontal Machining centre
13. Study on Rapid Prototyping Technologies,

Note: At the end of laboratory work, student shall submit evidence of team work in the form of project /assignments with neat documentation as assigned by concerned lab incharge/faculty.

ME-612: THEORY OF MACHINES LAB.

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
0	0	2	1	30	20	50	3 hrs.

Suggested List of Experiments:

1. To study various types of kinematic links, Pairs, Chains and Mechanisms, to study inversions of 4 Bar Mechanisms, Single and Double slider crank mechanisms.
2. To plot slider displacement, velocity and acceleration against crank rotation for Single Slider Crank mechanism.
3. To find Coefficient of friction between Belt and Pulley.
4. To study various type of Cam and Follower arrangements.
5. To plot follower displacement Vs cam rotations for various Cam Follower systems.
6. To generate spur gear involute tooth profile using simulated gear shaping process/ to study various types of gears – Helical, worm & bevel gear.
7. To study various types of gear trains – simple, compound, reverted, epicyclic and differential.
8. To perform experiment on Watt/Porter, Proell, Hartnell Governors to prepare performance characteristic curves and to find stability and sensitivity.
9. To study gyroscopic effects through models and also to determine gyroscopic couple on motorized gyroscope.
10. To perform the experiment for static balancing on static balancing machine.
11. To perform the experiment for dynamic balancing on dynamic balancing machine.
12. Determine the moment of inertial of connecting rod by compound pendulum method

ME-613: SEMINAR

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
0	0	3	2	50	50	100	3 hrs.

Suggested List of Activities:

Current topics related to any advanced topics assigned by the faculty or any (or more) of the advances in engineering affecting society or topics focussed as per future needs of mankind as also envisaged in following areas but not limited to:

1. Effect of advances in engineering on industry and society,
2. Impact of Financial Regulatory bodies on manufacturing as well as GDP,
3. Modern practices in Telecom Industry, and its effect on human behaviour,
4. Impact of technology on sports, and its effect on human behaviour,
5. Agricultural management and production,
6. Space Technologies and Innovations by mankind,
7. Effect of Technology on Education and Engineering, and its effect on society,
8. Role of Innovations leading to real Product Development within India and Exports from country.
9. Development of indigenous technologies, and Status of Innovation in general.
10. Intellectual Property Rights, Patents, and their effect on Product Development and Prosperity of a Country,
11. Modernization and Monetary Policy and its effects on Economy,
12. Any Current Topic of relevance to India with local as well as global perspective.
13. Labour laws and industrial safety practices.
14. Environmental impact assessment.

Programme Elective-I

ME-608: MODERN MANUFACTURING PROCESSES

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: Definition, classification of modern manufacturing processes, need of modern manufacturing processes vs. conventional manufacturing processes. Ultrasonic Machining – Elements of process, cutting tool system design, effect of parameters, economic considerations, applications, limitation of the process, advantages and disadvantages.	7
II	Abrasive Jet Machining – Variables in AJM, metal removal rate in AJM. water jet machining – jet cutting equipments, process details, advantages and applications. Electrochemical and Chemical Metal Removal Processes: Electrochemical machining – elements of ECM process, tool work gap, chemistry of the process, metal removal rate, accuracy, surface finish and other work material characteristics, economics, advantages, applications, limitations. electrochemical grinding – Material removal, surface finish, accuracy, advantages, applications.	9
III	Electric Discharge Machining (EDM): EDM of spark erosion machining processes, mechanism of metal removal, spark erosion generators, electrode feed control, dielectric fluids, flushing, electrodes for spark erosion, selection of electrode material, tool electrode design, surface finish, machining accuracy, machine tool selection, applications, wire cut EDM. Laser beam machining (LBM) – Apparatus, material removal, cutting speed and accuracy of cut, metallurgical effects, advantages and limitations.	9
IV	Plasma arc Machining (PAM): Plasma, Non- thermal generation of plasma, mechanism of metal removal, PAM parameters, equipments for D.C. plasma torch unit, safety precautions, economics, other applications of plasma jets. Electron beam Machining (EBM): Generations and control electron	9

	beam, theory of electronic beam machining, process capabilities and limitations.	
--	--	--

Text Books:

1. P.C. Pandey, H.S. Shan, “**Modern Machining Processes**”, McGraw Hill Education (India) Pvt. Ltd.
2. Amitabha Ghosh, Ashok Kumar Mallik, “**Machining Manufacturing Science**”, Affiliated East – West Press.

Reference Books:

1. G.F. Benedict, “**Non Traditional Manufacturing Processes**”, Marcel Dekker.
2. J.A. McGeough, “**Advanced Methods of Machining**”, Chapman and Hall.

Programme Elective-I

ME-609: MAINTENANCE AND RELIABILITY

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: Evolution of maintenance, objective of maintenance, maintenance and philosophies, maintenance concept maintenance management & technology, relationship with other functional areas, importance of maintenance, elements of good maintenance economics of maintenance, training and safety aspects in maintenance. Maintenance strategies: classification of maintenance programs. Corrective, preventive and predictive maintenance, comparison of maintenance programs, preventive maintenance concept, functions, benefits, limitations.	8
II	Condition based maintenance (CBM): Objectives, what to monitor, when to monitor, principal of CBM, condition based maintenance techniques, manual inspections, performance monitoring, vibration monitoring, oil debris. Spectroscopy, thermography and corrosion, monitoring steps in implementation of CBM, benefits of CBM. Reliability Centered maintenance (RCM): RCM logic, maintenance and RCM, benefits of RCM, total productive maintenance (TPM), introduction, key supporting elements of TPM methodology, evaluation and benefits.	9
III	Non-destructive Testing (NDT): Purpose and challenges, techniques, visual aids, boroscopes, endoscopes, fiber optics scanner, magnetic particles inspection, liquid penetrants. Ultrasonic radiography, selection of NTD techniques, merits/demerits and application of various techniques. Maintenance Planning and Control: Basic ingredients, basic steps in maintenance management, maintenance planning and control system, documentation, maintenance productivity areas for improvement.	9
IV	Reliability, maintenance & availability techniques: Techniques for improvement of operation reliability, safety and availability of machines	8

	and production system, maintainability criteria, checklist to assess the maintainability improvement program, fault diagnosis, pareto principle, ishikawa diagram.	
--	--	--

Text Books:

1. L.R. Higgin, “*Maintenance Planning and Control*”, McGraw Hill Education Pvt. Ltd.
2. Kelley Anthony, “*Maintenance Planning and Control*”, East-West Press Pvt. Ltd.

Reference Books:

1. B.S. Blanchard, E.E. Lowey, “*Maintainability Principal and Practices*”, Mc Graw Hill Education Pvt. Ltd.
2. B. Raj, T. Jayakumar, K. Thavasimutyi, “*Practical NDT*”, Narosa Publishing House.
3. Nieble Benjamin W, “*Engineering Maintenance Management*”, Marcel Dekker.

Programme Elective-I

ME-610: COMPOSITE MATERIALS

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: Modern materials in design, types, metals, polymers, ceramics, composites. Polymers-Classification thermo plastics and thermo setting plastics, applications, merits and demerits. Classification of composites: Types, Natural composites, Lamina, laminate and lamination theory, fiber types, forms and properties, Honey comb composites, advantages, applications. Matrix and their role, principal types of fibre and matrix materials, micro- and macro-mechanical analysis and properties, failure theories applicable on composite materials	8
II	Various Processes to make Composites: primary and secondary manufacturing – Layup and curing, open and closed mould processes, bag moulding, filament winding, pultrusion, pulforming, thermoforming, advantages and limitations of different processes. Manufacturing Metal Matrix and Ceramic Matrix composites: metal matrix and ceramic matrix composites, advantages, limitations and characteristics of ceramic and metal matrix composites, RTM, RIM, SRIM processes.	9
III	Fabrication Processes: Need of various material removal processes in composites, Machining, drilling, joining, routing, operations carried out on composites, etc. Challenges in material removal or joining processes of composite materials – Difficulties in turning, drilling, milling, welding, or other joining methods.	9
IV	Applications: Carbon – Carbon composites, applications in automobile, aerospace and general engineering. Composites as a alternative to existing engineering applications. Applications of metal matrix composites, ceramic matrix composites, components and processing techniques.	8

Text Books:

1. Autar K. Kaw, “*Mechanics of Composite Materials*”, CRC Press, NY, 1997.
2. B.D. Agarwal and L.J. Broutman, “*Analysis and Performance of Fibre Composites*”, John Wiley and Sons Inc, 1990.
3. F.L. Matthews and R.D. Rawlings, “*Composite Materials: Engineering and Science*”, Chapman and Hall, London, 1994.

Reference Books:

4. Sanjay K Mazumdar, “*Composites Manufacturing*”, CRC Press, NY, 2003.

SEMESTER-VII

ME-701: INDUSTRIAL AUTOMATION AND ROBOTICS

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Basic principles of automation, Hard automation, flexible automation extending the capabilities of conventional machines through improved devices and manipulators, transfer machines for assembly, multispindle automatics. Introduction to Robotics: Synthesis of elements with movability constraints, classification and specification of robots, laws of robotics, elements of robot anatomy, hydraulic, pneumatic and electrical manipulators, end-effectors and their design.	8
II	Robotic manipulation: automation and robots classification – drive technologies work-envelope geometries, motion control method, application: robot specifications – no. of axes, capacity and speed, reach and stroke, tool orientation, repeatability, precision, accuracy, operating environment.	9
III	Direct kinematics: the arm equation homogenous Co-ordinates – frames, translation and rotations, composite homogenous transformations, screw transformations, link Co-ordinates, the arm equation, a five-axis articulated robot, a four-axis SCARA robot, a six-axis articulated robot.	8
IV	Inverse Kinematics: Solving the arm equation: the inverse kinematics problem general properties of solutions, tool configuration, inverse kinematics of a five-axis articulated robot, four-axis SCARA robot, six-axis articulated robot and three-axis planar articulated robot. Performance analysis of industrial robots: Performance Analysis and their manufacturing applications, Economics of robotics.	9

Text Books:

ME-702: REFRIGERATION AND AIR CONDITIONING

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	1	0	4	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: Definition of refrigeration & air conditioning, Necessity, Methods of refrigeration, Coefficient of performance (COP), fundamentals of air-conditioning system, refrigerants- classification, nomenclature, desirable properties, comparative study, secondary refrigerants, Introduction to eco-friendly refrigerants and cryogenics. Air Refrigeration Systems: Carnot refrigeration cycle, Brayton refrigeration or the Bell Coleman air refrigeration cycle, Air craft refrigeration systems, Simple cooling and Simple evaporative types, Boot strap and Boot strap evaporative types, Regenerative type and Reduced Ambient type system, Comparison of different systems.	7
II	Vapour Compression (VC) Refrigeration Systems: (a) Simple Vapour Compression (VC) refrigeration systems- limitations of reversed carnot cycle with vapour as the refrigerant, analysis of VC cycle considering degrees of sub cooling and superheating, , comparison of VC cycle with air refrigeration cycle. (b) multistage refrigeration systems- necessity of compound compression, compound VC cycle , intercooling with liquid sub –cooling and / or water inter cooler: multistage compression with flash intercooling and / or water inter-cooling, systems with individual or multiple expansion valves, Individual compression system with individual or multiple expansion valves, individual compression systems with individual or multiple expansion valves with and without intercoolers.	9
III	Other Refrigeration Systems: (a) Vapour Absorption Refrigeration (VCR) systems – basic systems, actual COP of the system, performance, relative merits and demerits, properties of aqua ammonia, Electrolux refrigeration. (b) Steam Jet Refrigerating (SJR) System- (c) Cascade refrigerating systems- necessity selection of pairs of refrigerants for the system, concept of cascade temperature, analysis, comparison with V.C. systems, applications.	9
IV	Psychrometry of Air & Air Conditioning Processes: Properties of moist air-Gibbs Dalton law, basic terminology, psychrometric chart,	9

	psychrometry of air-conditioning processes, mixing process, basic processes in conditioning of air. Air- Conditioning Load Calculations: Outside and inside design conditions, sources of heating load, sources of cooling load, heat transfer through structure, solar radiation, electrical applications, infiltration and ventilation, heat generation inside conditioned space, apparatus selection. Air Conditioning Systems with Controls & Accessories: Classifications, layout of plants, equipment selection, air distribution system, duct systems design, filters, refrigerant piping, design of summer air conditioning and winter air conditioning systems, temperature sensors, pressure sensors, humidity sensors, actuators, safety controls, accessories.

ME-703: POWER PLANT ENGINEERING

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: Energy resources and their availability, Types of power plant, selection of the plants, review of basic thermodynamics cycles used in power plant. Hydro Electric Power Plants: Rainfall and run-off measurements and plotting of various curves for estimating power plants, design, construction and operation of different components of hydro-electric power plant, site selection, comparison of other types of power plants.	8
II	Steam Power Plants: Flow sheet and working of modern-thermal power plants, super critical pressure steam stations, site selection, coal storage, preparation, coal handling systems, feeding and burning of pulverized fuel, ash handling systems, dust collection-mechanical dust collector and electrostatic precipitator. Gas Turbine Power Plants: Types, open and closed gas turbine, work output & thermal efficiency, methods to improve thermal efficiency of gas turbine plant- reheating, inter- cooling regeneration & their combinations, advantage and disadvantages, comparison with steam power plant.	9
III	Nuclear Power Plants: Principles of nuclear energy, basic nuclear reactions, nuclear power station, trouble shooting and remedies. Power Plant Economics: Effect of plant type on costs, fixed elements, energy elements, customer elements and investor's profit, depreciation and replacement. Economics of power plants.	9
IV	Non-Conventional Power Generation: Solar radiation, solar energy collectors, OTEC, wind power plants, geothermal resources, direct energy conversion systems in fuel cell, MHD power generation-principle thermoelectric power generation, thermionic power generation.	8

Text Books:

1. P.K. Nag, “**Power Plant Engineering**”, McGraw Hill Education (India) Pvt. Ltd.
2. Bernhardt G.A. Skrotzki and William A. Vopat, “**Power Station Engineering and Economy**”, McGraw Hill Education.

Reference Books:

4. Gupta, “**Power Plant Engineering, Gupta**”, PHI Learning Private Limited.

ME-704: INDUSTRIAL ENGINEERING AND PRODUCTION MANAGEMENT**Teaching and Examination Scheme:**

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
2	2	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: Principles of management - definition and significance of management, basic functions of management – planning, organizing, staffing, directing and controlling. evolution of ie. engineers and organizational environment – social, economic, technological and political. social responsibility of engineers. Organizational behaviour and human resource management: Significance of OB, Role of leadership, personality and motivation. attitudes, values and perceptions at work. HR - importance, objectives and functions, job analysis and recruitment, selection and placement, training and development – forms of business organization.	6
II	Work study: Productivity definition, means of increasing productivity, productivity and work study work study - definition, aims, procedure for method study, selection of jobs, recording techniques, micro motion study, therbligs, cyclograph and chrono-cyclo-graph, principles of motion economy, design of work place layout, analysis in the form of chart, operation chart, flow process chart, flow diagram, string diagram, man machine chart, two hand chart, SIMO chart. – time study equipment, performance rating, allowances, number of cycles to be studied, determination of standard time, predetermined motion time systems. Job evaluation, wages, incentives and welfare: Job evaluation, objectives of job evaluation, Methods of job evaluation, non quantitative and quantitative. – characteristics of a good wage or a incentive systems, methods of wage payments, concept of wage incentive schemes, financial and non financial, Halsey premium plan, Merric's multiple piece rate system. working condition, service facilities, legal legislation – factories act, 1948.	6
III	Ergonomics: Definition, human technological system, multidisciplinary engineering approach, Biostatic mechanics, statics of rigid bodies, biodynamic mechanics, human body kinematics, kinetics, impact and collision, bio-thermodynamics and bioenergetics.	6

	Marketing feasibility analysis: Qualitative forecasting methods, quantitative forecasting models – forecast accuracy, long range forecast, short range forecast.	
IV	Facilities layout and plant location: Manufacturing facility layouts, analyzing manufacturing facility layouts, service facility layout. – factors affecting location decisions, multi facility location problem, ware house location problem, minimax location, gravity location problem. Inventory management and PPC: Views of inventories, nature of inventories, fixed order quantity systems, fixed order period systems, other inventory models, production planning and control- loading, scheduling, dispatching.	6

4. Chandler Allen Phillips, “**Human Factors Engineering**”, John Wiley and Sons, New York, 2000.

ME-708: MATERIAL HANDLING AND PLANT LAYOUT

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	General: Concepts and factors governing plant locations economics, rural economics, rural vs urban plant sites, case studies (i) selection of a site for software company (ii) selection of a site for XYZ Company: analysis of alternatives. Plant Layout: Introduction of plant layout, principles and objectives of effective layout, advantages of good layout, symptoms of bad layout. types of plant layout, their features. applications and comparison, introduction to group technology: its relevance, application and advantages.	8
II	Planning the layout: Factors influencing plant layout, material factors, machinery factors, man factors movement factors, waiting factors, service factors, change factors, building factors, workstation design methods of plants and factory layout, plant layout procedure, factory building, building equipments, common problems in plant layout, tool and techniques of layout, operation process chart, flow process chart, flow diagram, string diagram, evaluating alternate layout-various methods. Line balancing: Objective of line balancing problems, constraint in line balancing problem, terminology in assembly line, preventive measures to achieve a balanced production line. types of line balancing: (a) assembly line balancing (b) fabrication line balancing, heuristic and other method of line balancing, simple numerical problems in line balancing.	9
III	Materials handling : Objectives of material handling systems, material handling engineering survey, basic features of handling, types of material handling systems, material handling engineering survey, basic features of handling, various materials handling, considerations including combined handling, space for movements, analysis of handling methods, economical and technical considerations of handling equipment, cost analysis of material handling systems.	8

IV	Material handling equipments: Introduction, types of material handling equipment, selection and maintenance of material handling equipments, characteristics of material handling equipments such as conveyers, cranes, hoist, amount of equipments required and predicting in process inventory by graphical technique. Travel Chart: Procedure for travel charting, numerical problem on optimum arrangement of various departments of shops under given constraints and to check their effectiveness.	9

ME-709: INDUSTRIAL TRIBOLOGY

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: Tribology, contact of solids, nature of surfaces, surface topography, surface interactions and characterization, micro and nanotribology, surface roughness measurement techniques.	8
II	Friction: Types, laws, modern theories, dry sliding friction, temperature of sliding surfaces, mechanism of rolling friction, friction instabilities. Wear: Classification, theories of adhesive, abrasive, surface fatigue and corrosive wear, erosive wear, cavitation and fretting wear, wear models, wear of various machine components such as gears, plain bearings and rolling element bearing, ASTM standards for wear measurement, wear resistant materials, wear resistant components.	9
III	Viscosity: Basic definition, conversion, dynamic viscosity, measurement, variation with temperature, ASTM charts, viscosity index, grade of oil. Lubricants: Types of lubricants, selection of lubricants, properties and tests on lubricants, analysis of used oils/lubricants, particle counter, spectroscopic oil analysis, ferrography.	9
IV	Lubrication theories: Lubrication regimes, viscous flow and viscometry, Reynold's equation, energy equation, solution of reynolds equation, mechanism of pressure development in fluid film bearing, hydrodynamic lubrication, hydrostatic lubrication, elastohydrodynamic lubrication, lubrication between two contact bodies, Hertzian and non-hertzian contacts, phenomenon of starvation, boundary lubrication, squeeze films, turbulent lubrication	8

Text Books:

1. Bharat Bhushan, "**Introduction to Tribology**", Wiley India Pvt. Ltd.
2. S.K. Basu, S.N. Sengupta, B.B. Ahuja, "**Fundamentals of Tribology**", Pentice Hall of India Learning Pvt. Ltd.

2. Steven R. Schmid, Bernard J. Hamrock, Bo Jacobson, "*Fundamentals of Machine elements*", CRC Press.

ME-710: FINITE ELEMENT METHOD

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Interpolation and Approximation : Interpolation with unequal intervals-langrange's interpolation-Newton's divided difference interpolation-cubic splines, interpolation with equal intervals- Newton's forward and backward difference formulae Numerical Differentiation and Integration: Approximation of derivatives using interpolation polynomials- numerical integration using trapezoidal, Simpson's 1/3 rule, Romberg method-2 and 3 point Gaussian quadrature formula.	6
II	Initial Value Problems for Ordinary Differential Equation: Single Step methods- Taylor series method, Euler's method, modified Euler's method , Fourth order Runge Kutta method for solving first order equations - multi step methods - Milne's and Adam Bash fourth predictor corrector methods for solving first order equations.	6
III	Finite Difference Method: Finite difference methods for solving two-point linear boundary value problems – finite difference techniques for the solution of two dimensional Laplace's and Poisson's equations on rectangular domain – one dimensional heat flow equation by explicit and implicit (Crank Nicholson) methods – one dimensional wave equation by explicit method.	6
IV	Finite Element Method: Basic concepts of finite element method, boundary, initial and eigen value problems, Ritz Technique, one dimensional second order equations -discretization - element types - linear and higher order elements, derivation of shape functions and stiffness matrices and force vectors, assembly of matrices, solution of problems from solid mechanics and heat transfer.	6

Text Books:

1. Tirupathi R. Chandrupatla, Ashok D. Belegundu, “***Introduction to Finite Elements in Engineering***”, Prentice Hall India.
2. J.N. Reddy, “An Introduction to the Finite Element Method”, McGraw Hill Education,
3. B S Grewal, “***Numerical Method in Engineering***”, Khanna Publishers.

Reference Books:

1. E Balaguruswamy, “***Numerical Methods***”, Tata McGraw Hill
2. Robert D. Cook, David S. Malkus, Michael E. Plesha, Robert J. Witt, “***Concepts and Applications of Finite Elements Analysis***”, Wiley, 2007.

ME-711: PROJECT WORK-I.

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
0	0	4	2	50	50	100	3 hrs.

Suggested List of Activities/Projects :

Students are expected to complete a project in groups or alone as deemed fit by the faculty and department. They should work under supervision of Faculty member/s of department, or in collaboration with other departments, or preferably with Industry. The project should demonstrate application of the fundamentals learnt during the course of study and should also be innovative. Any of the following areas may be chosen for pursuing project work (but not limited to):

1. Development of ingenious and innovative products under guidance of supervisor and possibly involving industry,
2. Robotics and its utilization in manufacturing/day-to-day functioning of human life,
3. Computer Integrated Manufacturing,
4. Modernization in Production, and End product delivery,
5. Development of Bio-Mechanics related materials, mechanisms, contraptions, for patients, sports, normal human life functions,
6. Simulation studies of higher order to predict behaviour of materials,
7. Development of software modules for efficient functioning of an organization (MIS, ERP, etc.)
8. Mechanization modules development and application for increase of human comfort,
9. Inter-disciplinary work involving applications of electronics, computers, and other fields for the welfare of mankind,
10. Space Research related module development,
11. Any productive project involving application of engineering fundamentals in collaboration with industry, R&D institutes, institutes of international/national/state importance as deemed fit by the faculty members/concerned supervisor.

ME-712: AUTOMATION AND ROBOTICS LAB.

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
0	0	2	1	30	20	50	3 hrs.

Suggested List of Experiments/Activities:

1. To study complete automation system having the Linear conveyor
2. To study complete automation system having the Pick and place
3. To study complete automation system having the Rotary table
4. To study complete automation system having the Filling and packing
5. To study complete automation system having the Quality check
6. To study complete automation system having the Storage in warehouse
7. To program a robot for pick and place motion.

ME-713: THERMAL ENGINEERING LAB.

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
0	0	2	1	30	20	50	3 hrs.

Suggestive List of Practicals

1. To study the vapor compression Refrigeration Systems, water cooler and/or ice plant, its working cycle and determine its C.O.P.
2. To determine the By-pass factor of Heating & Cooling coils, and to study the cut-sectional models of reciprocating and Rotary Refrigerant compressor.
3. To study humidification, heating, cooling and dehumidification processes, and the various controls used in Refrigerating & Air Conditioning System.
4. To study Desert cooler and/or Window Type Air Conditioner and its efficiency.
5. To study and prepare report on the constructional details, working principle and operation of the following (a) Single plate clutch/Multi plate clutch, (b) Coil Spring Clutch, Diaphragm Spring Clutch.
6. To study and prepare report on the Safety, Emissions (BS II, III, IV, and higher, etc) NVH, CAE, Materials Used, of up to 2000 cubic centimeter Engine vehicle for comparison with smaller as well as larger capacity commercially available vehicles.
7. To study and prepare report on working of industrial boilers.
8. To study and prepare report on working of condenser.
9. To study and prepare report on the constructional details, working principles and operation of the following automotive tyres & wheel: (a). Various types of bias and radial plies tyres (b). Various types of wheels.
10. To study and prepare report on the constructional details, working principles and operation of the following automotive brake systems: a. Hydraulic & pneumatic brake system b. Drum brake system c. Disk brake system b. Antilock brake system.

Note: It is expected that students will become aware of domain of Automotive Research Association of India, Central Pollution Control Board norms applicable on vehicular emissions, impact of various orders issued by National Green Tribunals and such govt. regulators, Traffic norms applicable in India and other countries, Bharat and Euro norms, and recent innovations in non-polluting vehicle technologies.

ME-714: INDUSTRIAL/PRACTICAL TRAINING

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
0	0	0	2	50	50	100	3 hrs.

Note: Industrial training of 6 weeks duration attended after 6th semester for 6 weeks during summer vacations, and evaluated in 7th semester. The training may be in any of the following fields (but not limited to) as also suggested for project work :

1. Development of ingenious and innovative products under guidance of supervisor and possibly involving industry,
2. Robotics and its utilization in manufacturing/day-to-day functioning of human life,
3. Computer Integrated Manufacturing,
4. Modernization in Production, and End product delivery,
5. Development of Bio-Mechanics related materials, mechanisms, contraptions, for patients, sports, normal human life functions,
6. Simulation studies of higher order to predict behaviour of materials,
7. Development of software modules for efficient functioning of an organization (MIS, ERP, etc.)
8. Mechanization modules development and application for increase of human comfort,
9. Inter-disciplinary work involving applications of electronics, computers, and other fields for the welfare of mankind,
10. Space Research related module development,
11. Any productive project involving application of engineering fundamentals in collaboration with industry, R&D institutes, institutes of international/national/state importance as deemed fit by the faculty members/concerned supervisor.

SEMESTER-VIII

Programme Elective-III

ME-801: Total Quality Management

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction - Need for quality, evolution of quality, definition of quality - dimensions of manufacturing and service quality - Basic concepts of TQM, Definition of TQM, TQM Framework, Contributions of Deming, Juran and Crosby – Barriers to TQM. Quality Control and Improvement Tools: Check Sheet, histogram, pareto chart, cause and effect diagram, scatter diagram, control chart, graph, affinity diagram, tree diagram, matrix diagram, process decision program chart, arrow diagram, acceptance sampling, process capability studies, zero defect program (POKA-YOKE).	7
II	TQM PRINCIPLES: Leadership – strategic quality planning, quality statements, customer focus, customer orientation, customer satisfaction, customer complaints, customer retention - employee involvement, motivation, empowerment, team and teamwork, recognition and reward, performance appraisal, continuous process improvement – PDCA cycle, 5s, Kaizen - supplier partnership – partnering, supplier selection, supplier rating.	9
III	TQM TOOLS & TECHNIQUES: The seven traditional tools of quality, new management tools, six-sigma concepts, methodology, applications to manufacturing, service sector including IT – bench marking – reason to bench mark, bench marking process – FMEA – Stages, Types. Quality circles – Quality Function Deployment (QFD) – Taguchi quality loss function – TPM – concepts, improvement needs – cost of quality – performance measures.	9
IV	Quality Management System & Quality Audit: Quality Systems, Quality management principles, ISO-9000:2000, ISO 9001 : 2000, ISO 14000, Future of quality system audit, Audit objectives, types of quality audit, Quality Auditor, Audit performance. Case studies of TQM implementation in manufacturing and service sectors including IT.	9

Text Books:

1. Dale H. Besterfield, "*Total Quality Management*", Pearson Education Asia
2. Joel E. Ross, Susan Perry, "*Total Quality Management*", Vanity Books International

Reference Books:

1. James R. Evans, William M. Lindsay, "*The Management and Control of Quality*", SouthWestern (Thomson Learning).
2. J.S. Oakland, Les Pester, "*TQM – Text with Cases*", Butterworth – Heinemann Ltd.,
3. L Suganthi, Anand A Samuel, "*Total Quality Management*", Prentice Hall (India) Pvt. Ltd.

ME-802: NON-CONVENTIONAL ENERGY RESOURCES

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction: Trends of energy consumption sources of energy conventional and renewable, fossil fuel – availability and limitations, need develop new energy sources. Solar Energy: Solar radiation characteristic, solar collectors, flat plate and concentrating types, their comparative study, design and material selection. efficiency, selective paints and surfaces. heating of air and water for building and other uses. thermal storages, solar ponds, solar pumps, solar cookers etc. direct conversion of solar energy to electricity and its various uses, materials, limitations and costs.	8
II	Bio-conversion: Generation of bio gas, digesters and then design, selection of material, feed to digester, paralytic gasification, production of hydrogen, algae production and the their uses. Wind Energy: Types of rotors, horizontal axis and vertical axis system, system design and site selection.	10
III	Geo-thermal Energy: Sites, potentiality and limitation, study of different conversion system. Tidal Energy: Sites potentiality and possibility of harnessing from site, limitations.	8
IV	Ocean thermal energy: Principal of utilization and its limitation, description of various systems. Other non-conventional energy sources: Fluidized bed combustions, heat from waste and other sources.	8

Text Books:

1. G.D. Rai, “**Solar Energy Utilization**”, Khanna Publishers, New Delhi
2. John A Duffie, William A Beckman , “**Solar Engineering of Thermal Processes**”, John Wiley & Sons

Reference Books:

1. M.M. EL Wakil, “***Power Plant Technology***”, McGraw Hill Education.
2. P.C. Sharma, “***Power Plant Engineering***”, S.K. Kataria and Sons.

ME-803: PRODUCTION PLANNING AND CONTROL

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	PPC performance: PPC – Requirements, benefits, factors influencing PPC performance, 3 types of decisions – 3 Phases of PPC – Aggregate and Disaggregate Planning, Master Production Schedule (MPS) – techniques & hour glass principle – Bill of Material (BOM) structuring	8
II	MRP Material Requirements Planning (MRP): MRP System, inputs, outputs, benefits, technical issues – MRP system nervousness – Manufacturing Resources Planning (MRP II), resource planning, Final assembly scheduling	9
III	Capacity management: Capacity Planning using overall factors (CPOF), Capacity Bills, Resource Profiles, Capacity requirements planning (CRP) – I/O Control - Shop floor control, Basic concepts, Charts and rules: Gantt Chart, Priority sequencing rules and Finite Loading – Inventory models.	8
IV	Shop floor control: Shop floor control – Just in time (JIT) – Key elements, techniques – JIT & PPC, pull & push systems – Kanban system-types, number of Kanban calculations, design, advantages and disadvantages. ERP System ERP systems – Components, modules, implementation, advantages and disadvantages - technical aspects of SAP - Supply Chain Management (SCM) – components, stages, decision phases – Supply chain macro processes in a firm	9

Text Books

1. S.K. Mukhopadhyay, “*Production planning and control – Text and Cases*”, PHI Learning Pvt. Ltd
2. T.E. Vollmann, D.C. Whybark, F R Jacobs, “*Manufacturing Planning and Control for Supply Chain Management*”, McGraw Hill Education

Reference Books

1. Thomas A Curran, Gerhard Keller, "***SAP R/3 Business Blueprint: Understanding Enterprise Supply Chain Management***", Prentice-Hall
2. Daniel Sipper, R.L. Bulfin, "***Production Planning, Control, and Integration***", McGraw Hill Publishing Co.

ME-804: MECHATRONICS

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Introduction and Basics: Definition of mechatronics, a measurement system with its constituent elements, open and closed loop system, sequential controllers, micro-processor based controller, the mechatronic approach	7
II	Hardware of Measurement Systems: Force fluid pressure, liquid flow, liquid level, temperature, light sensors along with performance terminology data presentation elements: magnetic recording, data acquisition system, testing & calibration. pneumatic, hydraulic, mechanical and electrical actuation system: pneumatic and hydraulic system, mechanical systems, types of motion, kinematic chains, cams, gear, trains, ratehe t& pawl. belt & chain drivers, bearings. mechanical aspect of motor selection, electrical systems, mechanical & solid state switches, solenoids, d.c. & a.c. motors, stepper motors.	10
III	Digital Logic and Programmable Logic Controller: A review of number system & logic gates, Boolean algebra, Kanaugh Maps, sequential logic, basic structure of programmable logic controller, input/output processing, programming, timers, internal relays and counters, master & jump controls, data handling, analogue input/output, selection of a PLC.	8
IV	Microprocessor and Input/Output System: Control, microcomputer structure: microcontroller, applications, programming languages, instruction sets, assembly language program, subroutines, design and mechatronics: design process, traditional and mechatronics design: possible mechatronics design solutions for timed switch, wind screen wiper motion, bath room scale, a pick & place robot, automatic camera, engine management system & bar code recorder.	9

Text Books:

1. W. Bolton, "*Mechatronics:Electronic Control Systems in Mechanical and Electrical Engineering*", Pearsons Education, 4th Edition.

2. K.P. Ramachandran, G.K.Vijaraghavan, M.S. Balasundaram, “***Mechatronics: Integrated Mechanical Electronic Systems***”, Wiley India.

Reference Book:

1. David G. Alciation, Michal B. Histan, “***Introduction to Mechatronics and Measurement Systems***”, Tata McGraw Hill Higher Education

ME-805: GAS DYNAMICS

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Compressible flow – fundamentals: The adiabatic energy equation, Energy and momentum equations for compressible fluid flows, various regions of flows, reference velocities, stagnation state, velocity of sound, critical states, Mach number, critical Mach number, types of waves, Mach cone, Mach angle, effect of Mach number on compressibility.	7
II	Flow through variable area ducts : Isentropic flow through variable area ducts, T-s and h-s diagrams for nozzle and diffuser flows, area ratio as a function of Mach number, mass flow rate through nozzles and diffusers, effect of friction in flow through nozzles. Flow through constant area ducts: Flow in constant area ducts with friction (Fanno flow) - Fanno curves and Fanno flow equation, variation of flow properties, variation of Mach number with duct length. Flow in constant area ducts with heat transfer (Rayleigh flow), Rayleigh line and Rayleigh flow equation, variation of flow properties, maximum heat transfer.	9
III	Normal and oblique shock : Governing equations, variation of flow parameters like static pressure, static temperature, density, stagnation pressure and entropy across the normal shock, Prandtl – Meyer equation, impossibility of shock in subsonic flows, flow in convergent and divergent nozzle with shock. Flow with Oblique Shock – Fundamental relations, Prandtl's equation, Variation of flow parameters	9
IV	Propulsion: Aircraft propulsion – types of jet engines – study of turbojet engine components – diffuser, compressor, combustion chamber, turbine and exhaust systems, performance of turbo jet engines – thrust, thrust power, propulsive and overall efficiencies, thrust augmentation in turbo jet engine, ram jet and pulse jet engines. Rocket propulsion – rocket engines thrust equation – effective jet velocity specific impulse –rocket engine performance, solid and liquid propellants.	9

Text Books:

1. S.M. Yahya, “*Fundamental of compressible flow with Aircraft and Rocket propulsion*”, New Age International Pvt. Ltd., New Delhi, 5th Edition
2. John D Anderson, “*Modern Compressible Flow: with Historical Perspective*”, McGraw Hill Education, 3rd Edition
3. V. Ganesan, “*Gas Turbines*”, McGraw Hill Education, 3rd Edition

Reference Books:

ME-806: VIBRATIONS

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
3	0	0	3	40	60	100	3 hrs.

COURSE CONTENT:

UNIT	CONTENT	No. of Hrs.
I	Basic Concepts of Vibrations: Importance and scope, definition and terminology, representation of harmonic motions, introduction to various types of vibrations and types of excitation.	7
II	Single Degree of Freedom Systems: a) Un-damped Free Vibrations: D Alembert's Principle, Energy method, Rayleigh method, simple applications of these methods, equivalent spring stiffness. b) Damped Free Vibrations: Introduction to different types of damping, viscous damping, subcritical, critical and over-damping, logarithmic decrement, frequency of damped oscillations. c) Forced Vibrations: Solution for simple harmonic excitation, steady state vibrations, base excitation, vibration isolation and transmissibility, vibration measuring instruments, whirling of shaft without friction.	10
III	Two Degree of Freedom Systems: a) Un-damped Free Vibrations: Normal modes vibrations, natural frequencies, mode shapes, forced harmonic vibrations, torsional vibrations of two rotor system. b) Applications: Dynamic vibration absorber, centrifugal pendulum absorber, torsional vibration absorber, untuned vibration damper, gyroscopic effect on rotating shaft.	9
IV	Multi-Degree of Freedom Systems: Un-damped free vibrations: Reciprocity theorem, Rayleigh's and Dunkerley's method, three rotor and geared systems. Continuous Systems: Free vibration of the following for various end conditions: Vibration of a string, longitudinal vibrations of bar, transverse vibration of beam, torsion of vibrations of circular shaft.	8

Text Books:

1. S.S. Rao, “***Mechanical Vibration***”, Pearsons Education India, 4th edition
2. V.P Singh, “***Mechanical Vibration***”, Dhanpat Rai Publications.

Reference Books:

1. G.K. Grover, “***Mechanical Vibration***”, Nem Chand & Bros, 8th Edition
2. R.VDukkipati, “***Mechanical Vibration***”, Narosa Publishing House(2010)

ME-807: PROJECT WORK-II

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
0	0	16	8	50	50	100	3 hrs.

Note: Project Work during last semester duration is to be carried out by the student under the joint supervision of faculty advisers from institution as well as from the industry. The work should demonstrate *higher (than previous semesters)* standards of design, analysis and fabrication capability of the student learnt during the course. The students may work in groups, as deemed fit by the faculty/supervisors.

Any of the following areas may be chosen for pursuing project work (but not limited to):

1. Development of ingenious and innovative products under guidance of supervisor and possibly involving industry,
2. Robotics and its utilization in manufacturing/day-to-day functioning of human life,
3. Computer Integrated Manufacturing,
4. Modernization in Production, and End product delivery,
5. Development of Bio-Mechanics related materials, mechanisms, contraptions, for patients, sports, normal human life functions,
6. Simulation studies of higher order to predict behaviour of materials,
7. Development of software modules for efficient functioning of an organization (MIS, ERP, etc.)
8. Mechanization modules development and application for increase of human comfort,
9. Inter-disciplinary work involving applications of electronics, computers, and other fields for the welfare of mankind,
10. Space Research related module development,
11. Any productive project involving application of engineering fundamentals in collaboration with industry, R&D institutes, institutes of international/national/state importance as deemed fit by the faculty members/concerned supervisor.

ME-808: INDUSTRIAL PROJECT

Teaching and Examination Scheme:

Teaching Scheme			Credits	Marks			Duration of End Semester Examination
L	T	P/D	C	Sessional	End Semester Exam	Total	
0	0	16	8	50	50	100	3 hrs.

Note: Industrial Project of Four months duration is to be carried out by the student in industry under the joint supervision of faculty advisers from institution as well as from the industry

Suggested List of projects:

1. Any productive project involving application of engineering fundamentals to solve problems encountered by human kind, in collaboration with industry, R&D institutes, institutes of international/national/state importance as deemed fit by the faculty members/concerned supervisor.
